PREFACE

Under 53-24-204 2(b) MCA, the Department of Institutions is required to update, each biennium, its four year Comprehensive Chemical Dependency Plan. This supplement, therefore, addresses changes in statistical information, current county and program objectives and statewide service planning for fiscal years 1986 and 1987. The current supplement is designed with the following objectives in mind.

1. To assist the citizens of Montana in understanding the problems of chemical dependency and efforts currently employed to deal with these problems;
2. To provide a policy document that promotes efficiency, cost effectiveness and availability of chemical dependency services within the state; and
3. To provide information to service providers, other agencies involved with chemical dependency services, state and local government agencies, and the Montana Legislature about the current status and future requirements of chemical dependency programming.

The department coordinated its planning process with the Montana Department of Health and Environmental Sciences and the Montana Health Systems Agency (HSA) to ensure that this document is in accord with the Montana State Health Plan.

Alcoholism is one of the most serious health problems facing Montana today; over 106,000 Montanans are estimated to suffer problems from alcohol use or misuse. Since 1982, Montana has ranked thirteenth in the nation for per capita alcohol beverage consumption. The Montana Highway Patrol reports that 50% of all persons killed on Montana highways in 1983 had been drinking and 56% of all drivers killed had been drinking prior to the accident. Alcoholism impacts on many of the state's concerns -- from traffic fatalities to child abuse.

Although alcohol is the major drug of abuse in Montana, treatment statistics reveal that the state also has a serious multi-drug problem. Out of 6,649 clients admitted to the state-approved chemical dependency programs in 1984, 36% had a secondary drug problem and 22% had a tertiary problem with drugs other than alcohol.

There are currently 38 state-approved chemical dependency programs in the state with outpatient services provided in all counties. State-approved chemical dependency programs have averaged 10,095 first admissions per year since 1980; 5,740 were primary clients, 1,697 were family member clients and 2,658 were DUI court school clients. During the past four years, DUI admissions have more than tripled from 1,219 in 1980 to 4,123 in 1984.

Since 1980, 53% of all clients admitted to state-approved programs have completed treatment. Of the clients who completed treatment, 50% were contacted six months after discharge; of those clients contacted, 79% reported total abstinence and 60% were employed.

This plan is primarily based on information and problems identified in approved county chemical dependency plans. Chapter 5.0 contains a summary of each county's plan and a regional summary of common problems and concerns.

Major problems noted statewide are: (1) providing inpatient treatment to indigents; (2) a gap in the continuum of care resulting from the lack of transitional living facilities within the state; and (3) a decrease of public funds available for treatment programs due to decreased liquor sales.

State approved programs are basically funded by the earmarked alcohol tax and federal block grant funds. The earmarked alcohol tax is tied directly to the volume of alcoholic beverages sold in the state and is distributed to the counties based on 85% county population/15% county land area to total state population and area. Federal block grant funds are awarded to local programs on a competitive contract basis. The 1983 legislature authorized the expenditure of block grant carry over funds to alleviate any shortfall of earmarked alcohol revenues during FY84 and FY85. This action maintained current level services in FY84 but falls short by \$70,066 in maintaining current level services in FY85.

Initially, a one-time infusion of federal funds offset the reduction of alcohol earmarked tax in the last biennium, but such infusion will not be available in the foreseeable future. With the passage of HB 374 increasing the wine tax by 7¢ per liter and the increase in the federal excise tax on distilled spirits by \$2.00 per proof gallon, effective October 1, 1985, it is expected that this will somewhat offset the decline in sales and current level services will be maintained in the 86-87 biennium. However, unless the funding mechanism for chemical dependency programs is changed, a continued decrease in the consumption of liquor will result in the reduction of funding available to chemical dependency programs which depend upon public funding. See tables 1 and 2 for estimated revenue.

In order to decrease their dependence on public funds, the Department has encouraged state approved programs to generate additional revenue from fees paid by those persons to whom services are provided. Legislation passed by the 1983 legislature which requires insurance coverage for alcoholism and drug abuse treatment has assisted the programs and their efforts to generate additional service revenues.

Based on information and common problems identified in county plans, program performance documentation, legislative priorities and the current funding situation, the department has identified four long term priorities; (1) maintaining the current level of services, (2) maintaining the quality of services, (3) allocating resources to ensure efficiency, and non-duplication, cost effectiveness and availability of services, and (4) encouraging local communities and state-approved programs to play the primary role in the development and implementation of prevention activities. This document details a workable plan for dealing with Montana's chemical dependency problems and will ensure the continued availability of quality treatment services to the people of Montana.

1.0 State Agency Policy and Planning Process

1.1 Introduction

The Department of Institutions, Alcohol and Drug Abuse Division is required by state law to prepare a long term [four year] state plan for chemical dependency and to publish an updated supplement to the plan each biennium. This supplement is a public document that presents a coordinated plan for the development and means of providing alcohol and drug abuse prevention, treatment and rehabilitation services for the entire state.

The updated plan serves as a basis for the utilization of federal, state and all other available resources in planning, establishing, maintaining, coordinating and evaluating prevention, treatment and rehabilitation projects and programs for alcohol and drug abusers within the state.

This state supplemental chemical dependency plan is to be used as a guide for coordinated statewide efforts; it is not intended to be an unchanging document, but is designed as a workable tool for use by all groups and agencies working with alcohol and drug abuse within the state.

1.2 Purpose

Under delegated authority from the Director, Department of Institutions and 53-24-204 MCA the Alcohol and Drug Abuse Division will:

- 1) Approve treatment programs in accord with 53-24-208 and the Administrative Rules of Montana, Vol. 7, Chapter 3.
- 2) Prepare a long term [four year] state chemical dependency plan for the delivery of treatment services, with a biannual update.
- 3) Provide and conduct statewide service system evaluations.
- 4) Distribute state and federal funds to the counties for approved treatment programs in accordance with the provisions of 53-24-206 MCA.
- 5) Plan in conjunction with approved programs and provide for training of program personnel delivering services to chemically dependent persons.
- 6) Establish criteria for development of new programs.
- 7) Certify chemical dependency counselors and instructors providing chemical dependency educational courses.
- 8) Plan for the greatest utilization of funds by discouraging duplication of services; encourage efficiency of services through existing programs; and encourage rural counties to form multi-county districts or to contract with urban programs for services.
- 9) Cooperate with the Board of Pardons in establishing and conducting programs to provide treatment for chemically dependent and intoxicated persons in or on parole from penal institutions.

- 10) Establish standards for chemical dependency educational courses provided by state approved treatment programs and approve or disapprove the courses.

1.3 Program Philosophies and Policies

The statewide philosophy for delivery of alcohol and drug abuse services must be sensitive to situations unique to Montana. While Montana ranks fourth in geographical area [147,128 square miles] it ranks 38th among states in population with approximately five persons per square mile. The racial distribution of the state is 94 percent white, with the remainder being predominantly American Indian.

Administration

Responsibility for all functional activity carried out under the Montana Comprehensive Chemical Dependency Plan rests with ADAD staff, the State Advisory Council on Alcohol and Drug Dependency with final authority from the Director, Department of Institutions.

The Advisory Council is composed of ten members appointed by the Department Director and approved by the Governor. The council meets at least quarterly to review and recommend policy, to evaluate project and program activities and to recommend priorities for action and expenditures. [See Exhibit 1 - List of Council Members]

The administration of chemical dependency programs by the state is designed to accomplish the following:

- 1) Assure that all state-approved chemical dependency treatment service providers meet the provisions of Chapter 24 of Title 53 MCA.
- 2) Assure that outpatient services are available to all Montana counties.
- 3) Assure that all funded service providers operate at an optimum level.
- 4) Assure that clients are provided a continuum of services and are not lost in the referral process.
- 5) Assure that treatment services are not duplicated within counties.
- 6) Assure that special populations [minorities, youth, women, aged] receive adequate and appropriate services.

Treatment and Rehabilitation

The purposes of treatment and rehabilitation programs are to minimize identifiable problems caused by alcohol and drugs for individuals and for society, while increasing abuser participation in socially acceptable, productive activities as an alternative to dysfunctional abuse. The use of any chemical substance, legal or illegal, which creates behavioral or health problems resulting in operational impairment is viewed as chemical dependency.

1.4 County Planning Process

In accord with 53-24-211 MCA, local planning for chemical dependency services is the responsibility of each county's board of commissioners. County plans will be developed every four years with an annual expenditure update. County plan guidelines are provided by the Division and a standardized format is used by each county. The guidelines also allow for development of multi- county plans. County Plans include the following sections:

- 1) Analysis of County Needs
- 2) Treatment and Rehabilitation
- 3) Fiscal Year Action Strategy
- 4) Prevention

County plans provide the Division with uniform planning information, local needs and priorities and also solutions to local service delivery problems. As part of the planning process, counties must determine special population needs including the needs of American Indians. County alcohol tax monies are allocated as part of each year's county plan update subject to approval by the Department of Institutions.

When requested to review certificate of need proposals involving chemical dependency facilities, the Division utilizes information contained in the affected areas' county plan or plans to aid in determining the validity of such proposals. Statistics and other pertinent information may reflect the need for proposed services.

County plans must be submitted to the Department of Institutions, Alcohol and Drug Abuse Division for review every four years by December 31st. Annual expenditure updates must be submitted each year for review by December 31st. [See Exhibit 2, Planning Schedule).

1.5 State Planning Process and Coordination with other Agencies

Planning Process

Responsibility for preparation of the State Chemical Dependency Plan will continue to rest with the Alcohol and Drug Abuse Division. Preparation of the state plan is based on needs and information identified in county plans, legislative priorities and from program performance documentation, cost data and relevant statistical information. The Division will prepare a long term [four year] plan draft for review by the State Advisory Council, treatment providers and the general public. Statewide priorities are recommended by the State Advisory Council based on county plan priorities, ADAD staff recommendations and funding availability subject to final approval by the Department Director.

Each Administrative Officer within the Division is responsible for developing annual work plans for their respective areas of responsibility based on needs assessment information, county and state priorities and legislative mandates. The annual ADAD work plan is reviewed by the State Advisory Council for recommendations.

PLANNING PROCESS

° County or Multi-County Plans

° Counties must submit County Chemical Dependency Plans every 4 years and updates every year to the ADAD by December 31, of each year*.

° ADAD and the State Advisory Council will review all plans and notify counties of initial approval or non-approval of plan by April 1, of each year.

° ADAD will notify counties of any problems relating to non-approved plans so corrective action can be taken.

° All plans or revisions must be approved by the ADAD by June 30, of each year*.

° ADAD will use all approved county plans to develop the State Chemical Dependency Plan and biannual supplement.

* If dates are not met, the Department may no longer allocate tax monies to counties.

Coordination With Other Agencies

The Division recognizes the need to continually improve coordination among state agencies for certain aspects of the total service delivery system. The Department of Institutions, Alcohol and Drug Abuse Division, has the primary responsibility but other state departments have specific functions. This Department intends to create every opportunity for meaningful involvement of other state departments having a role in the delivery of chemical dependency services throughout the state. Working relationships have been developed with the Departments of Health and Environmental Sciences, Social and Rehabilitation Services, Justice, Highways and the State Office of Public Instruction.

The Alcohol and Drug Abuse Division coordinates the planning process with the Montana Health Systems Agency and the Department of Health and Environmental Sciences to ensure consistency with the Montana State Health Plan.

2.0 Administration

2.1 Alcohol and Drug Abuse Division Organization

The Alcohol and Drug Abuse Division exists within the Department of Institutions and is the designated state authority for alcohol and drug services. All major management functions, with the exception of sub-contractor reimbursement and on-site financial monitoring are performed by ADAD staff; the latter two functions are the responsibility of the Department's Management Services Division.

ADAD staff roles and responsibilities are divided into two functional areas: Operations and Support, and Standards and Quality Assurance. Responsibilities for these two functional areas are shown on the organizational chart in Exhibit 3.

2.2 Administration of Chemical Dependency Programs and Distribution of Funds

Distribution of Liquor Tax Funds

The Department of Institutions distributes earmarked alcohol tax monies to counties based on a formula of 85 percent of a county's population in proportion to the total state population and 15 percent is allocated to the counties according to the proportion of the county's land area to the state's land area. The law also provides for incorporated cities to receive 30 percent of the liquor tax from the County Treasurer and for counties to retain 4.5 percent for administration [See Tables 1 and 2, Liquor Tax Distribution Information].

The Department distributes its limited discretionary funds each fiscal year to qualifying programs on a contract-for-services basis. Contract awards are made based on priorities established by the legislature and priorities delineated in state and county chemical dependency plans. Recommendations for distribution of discretionary funding are made by the Division's grant review committee, Division Administrator, State Advisory Council with final approval from the Director of the Department of Institutions. [See page 73]

Although the alcohol earmarked tax delined in FY85, it was the Department's intent to try and maintain the same level of public funding as was available in FY84. Because the decline in sales was greater than that projected, the Department was unable to maintain the FY85 level by \$70,006.

With the passage of H.B. 374 increasing both the beer and wine tax and the increase in the federal excise tax, the Department will be able in FY86 to nearly make up the FY 85 shortfall which resulted from decreased sales. [See Table 1 for Tax Breakdown and Distribution). If liquor sales decline more than forecasted, however, community programs will be operating with a lower level of public funds than in the preceding biennium in spite of the tax increases. The Department believes it is imperative that programs generate a higher percentage of their operating budget from service revenue to decrease dependency on public support.

Revenue from the 7¢ increase in the wine tax will go to the Department of Institutions earmarked fund for distribution to the counties for chemical dependency treatment. The additional 30¢ tax on beer is designated for the

State General fund to be appropriated to the Department of Social and Rehabilitation Services for the provision of residential chemical dependency treatment for indigent youth.

Distribution of Drug Funding

Drug services are funded by federal block grant monies and a general fund appropriation. There are currently 12 funded drug clinics operated by state-approved chemical dependency programs throughout the state with services available in all regions. Current funding will provide services to over 400 clients mostly with a primary problem of a drug other than alcohol. Service providers are to put emphasis on those clients whose primary problem is hard drugs [non marijuana] and those with a history of involvement in the criminal justice system.

The Department will continue to contract the block grant monies and a general fund appropriated to approved programs providing drug services. In FY85, the Department contracted with the South Central Montana Regional Mental Health Center in Billings, Rimrock Foundation in Billings, Recovery Foundation in Missoula, Flathead Valley Chemical Dependency Center in Kalispell, Gallatin Council on Health and Drugs in Bozeman, the Providence Center in Great Falls based on a cost per unit of service mechanism. The Department believes that this mechanism for funding chemical dependency services is the most cost effective method, and eventually all chemical dependency services will be funded in this manner. In addition, in FY86 the Department intends to contract with the Boyd Andrew in Helena, Butte Alcohol and Drug Services, Butte, District II, Glendive, and Chemical Dependency Services, Miles City for drug services on the cost per unit of service basis. The remaining programs will be funded on a slot cost mechanism and be expected to maintain 100% utilization rates of their allotted treatment slots.

The Division uses its competitive contract process to distribute these monies each fiscal year. Criteria used for the distribution of drug funding include:

1. Adherence to instructions and completeness of the Department's funding application packet.
2. Evidence that drug services are needed based on the number of clients admitted during the previous year with a primary problem other than alcohol and marijuana and those with a history of involvement within the criminal justice system.
3. Demonstrated program effectiveness as measured by out-patient indicators.
4. Identification and documentation of need as addressed in the current fiscal year county chemical dependency plan.
5. Consideration of the number of drug services (treatment slots) presently available within the region compared to the region's population.

Administration of Chemical Dependency Programs

Counties are responsible for:

- Planning - determining the best allocation of alcohol tax monies given local and state constraints and development of a county chemical dependency plan.
- Provider Selection - Choosing and contracting with the provider(s) best qualified to deliver a service. Monies must be allocated to state-approved programs.
- Contract Compliance - Monitoring the activities of chosen contractors to assure optimum performance and making appropriate contract enforcement actions if necessary.

The Alcohol and Drug Abuse Division administers statewide chemical dependency services based on the following activities:

- Planning - Preparation of a long term state plan for chemical dependency based upon needs and information identified in county plans and legislative priorities.
- Funding - Distribution of Department discretionary block grant monies to state-approved programs that meet funding priorities.
- On-Site Program Evaluation and Approval - Alcohol and Drug Abuse Division staff conduct, at least annually, intensive on-site reviews of providers to ensure compliance with state laws and standards and to determine program approval status.
- Certification. The Division will certify all chemical dependency counselors and educational course instructors (D.U.I. and M.I.P.) employed in state approved programs.
- Collection of Treatment Statistics - The Division will collect treatment statistics from all state-approved chemical dependency programs using the computerized Alcohol and Drug Information System [ADIS].

As mandated by law, programs are state approved or disapproved on an annual basis according to specific approval criteria. A program must achieve and remain in approved status to qualify for state and county liquor tax funds.

2.3 Contract Process and Contract Monitoring

The Division will continue to follow a standardized procedure for reviewing proposals and awarding discretionary contracts. A Bidder's Conference is held each year to inform applicants of the contract system, funding priorities and review criteria.

It is the responsibility of the Division's Operations and Support Manager to monitor programmatic compliance of each contract and the Department's Management Services Division to monitor financial compliance and arrange for audits when necessary.

2.4 Management Information System

ADAD recognizes that accurate data is essential for efficient program planning, management and evaluation. The Division will collect and analyze statistical data from all state-approved treatment facilities according to state law, Section 53-24-208 MCA. All state approved chemical dependency programs report on the Alcohol and Drug Information System [ADIS] as a requirement of state approval.

Basic descriptive information about each client is collected at admission, discharge and follow-up [6 months after completion of treatment]. Information collected on the ADIS is used by the Division:

- to provide data comparing all programs using a standardized procedure
- to assist the Division in assessing the need for additional services and in determining contract levels
- to assist in evaluation and management of existing programs
- to analyze programs' client populations
- to respond to requests for information

Output reports which summarize ADIS data are distributed for use by each program on a monthly basis. The output contains information about each reporting program. The following output reports are sent to all programs on a regular basis:

- Client Admission Characteristics Report - provides demographic and socio-economic information at admission for alcohol/drug, family and DUI clients.
- 90-Day Caseload Report - lists all treatment clients on active or inactive [not discharged] status at the end of each report month.
- Monthly Summary Report - Summarizes caseload, staffing, prevention and non-client contact information for all state approved programs during the report month.
- Monthly Follow-Up Listing - lists all alcohol and drug clients due a mandatory 6 month follow-up.
- Program Effectiveness Report - summarizes follow-up information and measures client changes between admission and discharge and between admission and the mandatory 6 month follow-up.

The Division processes approximately 3,000 report forms each month. In addition to processing ADIS data, Division staff provide technical assistance and training to treatment personnel in data collection and data utilization.

2.5 Evaluation and Program Approval

Comprehensive on-site reviews of treatment programs are conducted on an annual basis prior to issuance of a state-approval certificate. On-site reviews are conducted in accordance with 53-24-208 MCA and Vol. 7, Title 20, Chapter 3 of the Administrative Rules of Montana. Procedures for conducting on-site evaluations have been published in the Montana Program Approval and Evaluation Manual for Alcoholism and Drug Abuse Treatment.

The purpose of the on-site program evaluation process is as follows:

- To approve or disapprove alcohol and drug programs
- to help ensure statewide compliance with state and applicable federal standards
- to improve program performance and client service levels
- to help achieve efficiency and economy in program operations
- to assist in determination of program funding levels and approval of contracts
- to determine areas of needed technical assistance and training
- to gather data for development of additional state standards for program performance
- To approve DUI and MIP educational courses provided by approved programs.

Any chemical dependency program receiving alcohol earmarked revenue funds under 53-24-108 MCA or Federal block grant funds is subject to approval by the Department of Institutions. The Department will issue approval for the following service components:

- Detoxification [emergency care] component
- Inpatient [hospital care] component
- Inpatient [free-standing care] component
- Intermediate [transitional living care] component
- Outpatient care component
- Education Courses (DUI, MIP)

Program Approval Process

Programs seeking approval for the first time or a program that proposes to add a new service must submit written application to the Department of Institutions, Alcohol and Drug Abuse Division. Within thirty days of receiving the application, the applicant will be notified in writing of acceptance or denial. If the application is accepted an on-site review will be scheduled.

All approved chemical dependency programs will receive at least one on-site evaluations per year. If a program is determined to be in substantial compliance with state requirements, the department will issue a certificate of approval to the program for one year. Any approved chemical dependency program that fails to meet substantial compliance will be issued a restricted approval which will be valid for not more than ninety days. Prior to expiration of the restricted approval, ADAD will conduct a follow-up evaluation to determine if substantial compliance has been obtained. In the event substantial compliance has been obtained, approval status will be granted. If the program fails to meet substantial compliance, the department will begin steps to revoke the program's approval status. When the department begins

procedures to remove a program's approval status, the program may request a hearing in accordance with procedures specified in the Administrative Procedures Act.

Definitions relating to program approval are as follows:

Approval - a status granted to a chemical dependency treatment program determined to be in substantial compliance with state requirements and applicable federal requirements.

Limited Approval - a status of state approval granted to chemical dependency treatment programs which are requesting approval for the first time and that have not attained substantial compliance. Limited approval not to exceed 6 months is granted to give new programs time to comply with state standards.

Restricted Approval - a status of state approval granted to an approved chemical dependency program which has failed to maintain substantial compliance. Restricted status is issued for a maximum of ninety days in order to allow the program to meet substantial compliance. This approval cannot be renewed.

Revoke - invalidation of approval of a chemical dependency program.

Substantial Compliance - conformity with at least 70 percent of the rules and regulations for each applicable service component as published in the Administrative Rules of Montana.

Suspension - invalidation of approval of a chemical dependency program for any period less than one year or until the department has determined substantial compliance and notifies the program of reinstatement.

2.6 Certification and Training

Certification

The State of Montana chemical dependency counselor certification system resulted from legislation passed by the 1980 legislative session, and is explained in full under sections 20.3.401 through 20.3.406 of the Administrative Rules of Montana. The system, fully operational since April 1, 1980, certifies all chemical dependency counselors employed in state approved programs, as well as those applicants who, for various reasons, wish to attain certified status.

Certification is a two tier structure based upon a point system. Tier one is a general chemical dependency certification with points given for work experience, college coursework, structured workshop training, performance on a written examination, and performance ratings on a taped work sample. Tier two provides endorsements in the three fields of: 1) Chemical Dependency Counseling; 2) Education/Prevention; and c) Management and Supervision.

Endorsements are acquired by points assigned based on oral examination.

Upon submission of a registration form, obtainable from the Alcohol and Drug Abuse Division, each applicant is sent a certification package containing the information and forms from which pre-certification credits or points accrue. The number of points awarded, resulting from submitted documented information determines the applicants' progression through the examination process and subsequent certification.

All counselors and educational course (DUI & MIP) instructors employed in state approved chemical dependency programs must be certified. These persons are afforded a period of one year from the date of first employment as a counselor or instructor to attain certified status.

Recertification is mandatory after a three year period and requires the acquisition of 30 points from training and work experience during the allotted time. Failure to attain re-certification results in certificate suspension until requirements are satisfied.

Further information and detailed instructions regarding the system may be obtained from the Certification Coordinator, Alcohol and Drug Abuse Division, 1539 11th Avenue, Helena, MT 59620.

Training

Since ADAD funding for training activities is non-existent, all programs will be encouraged to provide regional or district training, charging minimal participant fees, and employing program or other available persons as trainers. ADAD will provide training need priorities by summarizing training information supplied through the counselor certification system. A training calendar listing all available information pertaining to in and out-of-state training will be published and made available, on a quarterly basis, to chemical dependency programs and personnel. All proposed training presentations will be reviewed by ADAD to ensure compliance with certification requirements. Applicants for training approval will be notified of certification status.

If training funds should become available, ADAD will consider contracting for special training events essential to all program operations such as obtaining insurance payment for treatment, recordkeeping, billing, accounting procedures as well as treatment oriented subjects.

2.7 Prevention

Prevention of alcohol and drug abuse in Montana is predicated on the philosophy that each individual is responsible for his own actions and given accurate and sufficient information and education, will make responsible decisions. The ADAD prevention mission is to provide all citizens of Montana with the information necessary for them to make responsible decisions about use of alcohol and drugs, to promote alternatives to alcohol and drug abuse and to educate parents, teachers, health professionals and social service personnel in effective techniques for promoting prevention activities of other state and local agencies.

ADAD strongly urges local communities to play the primary role in the development and implementation of prevention activities and community commitment toward program continuation funding. Staff and funding limitations at the state level makes it imperative that available time and resources be directed towards supporting community based prevention projects.

Staff and funding limitations at the State level again make it imperative that available time and resources be directed toward supporting community based prevention activities. ADAD funding guidelines stress program funding and development at the county level with strong community support for prevention activities and a local commitment toward program continuation funding.

The Division still continues to encourage the implementation of the Montana's Teacher Guide for Alcohol Education in grades K - 12. Although efforts at its implementation have been frustrated by lack of funding, its use is still supported by the Division. The Department will continue to print and distribute a limited number of copies based on available funds. The Department will continue to provide on a limited basis, alcohol and drug booklets and pamphlets to individuals and organizations, and will distribute all bulk materials received from the National Institute on Drug Abuse and the NIAAA.

Under provisions of Block Grant funding, all drug clinics will be required to provide prevention, education and early intervention activities at the level required in FY 85. Each contract for drug program services will require that 15% of the budget be used to provide prevention programming. Also, all drug clinics will be required to develop measurable objectives related to prevention activities and these objectives will be included as part of each contract. The Division will be responsible for monitoring progress toward stated goals and objectives along with expenditures on a quarterly basis. The department will monitor all chemical dependency programs under contract with the department to determine the level of expenditures for prevention in order to ensure that an acceptable amount is being utilized.

3.0 Statewide Service Systems

3.1 Care Components

The Montana chemical dependency treatment system includes the following care components:

Detoxification [emergency care] component - services required for the treatment of persons intoxicated or incapacitated by alcohol and/or drugs. Detoxification involves clearing the system of alcohol and/or drugs and enabling individual recovery from the effects of intoxication. These services include screening of intoxicated persons, counseling of clients to obtain further treatment, and referral of detoxified persons to other appropriate treatment programs. Medical detoxification refers to short term treatment in a licensed medical hospital. Non-medical detoxification refers to short term treatment in a social setting with 24-hour supervision.

Inpatient [hospital care] component - treatment for persons requiring 24-hour supervision in a licensed hospital or suitably equipped medical setting licensed by the Department of Health under Section 50-5-201 MCA. Services include medical evaluation and health supervision; chemical dependency education; organized individual, group and family counseling; discharge referral to necessary supportive services; and a client follow-up program after discharge.

Inpatient [free-standing care] component - treatment for persons requiring 24-hour supervision in a community based residential setting. Services include a physical exam signed by a licensed physician; chemical dependency education; organized individual, group and family counseling; discharge referral to necessary supportive services and a client follow-up program after discharge.

Intermediate [transitional living care] component - a non-medical residential facility in a community based setting. These facilities provide a transitional phase for individuals who have recently received chemical dependency inpatient care services and require a moderately structured living arrangement. Services provided include counseling services [individual and group], chemical dependency education and social and recreational activities. These individuals are encouraged to seek vocational rehabilitation, occupational training, education and/or employment as soon as possible.

Outpatient care component - services provided on a regularly scheduled basis to clients residing outside a program. Services include crisis intervention; counseling; chemical dependency education; referral services; and a client follow-up program after discharge. D.U.I. and Minors in Possession educational courses may also be provided as outpatient services.

Specific approval standards for the individual care components can be found in Volume 7, Title 20, Chapter 3 of the Administrative Rules of Montana with further explanation in the Montana Program Approval and Evaluation Manual for Alcoholism and Drug Abuse Treatment Programs.

3.2 State-Approved Chemical Dependency Programs

Publicly supported chemical dependency services in Montana are delivered in three major settings: 1) community outpatient programs, inpatient programs serving a statewide clientele and programs at State institutions, such as Galen and the correctional institution chemical dependency programs. There are also chemical dependency programs throughout the state which are not publicly funded that have met state standards and have fulfilled all requirements of state approval.

Following is a list, by region, of state approved chemical dependency programs and approved care components.

3.3 Third Party Payments and Client Fees

The 1983 Montana Legislature passed Senate Bill 107 which required that benefits for the treatment of alcoholism and drug addiction must be made available in all group and individual health insurance policies [Section 33-22-703 MCA].

In addition to mandatory group coverage major changes in the new legislation include: payment of fees for treatment in free-standing state-approved inpatient and outpatient facilities, payment if the treatment plan is approved and monitored by either a physician or State certified chemical dependency counselor. Benefits limited to no less than \$4,000 in any 24-month period and \$8,000 in lifetime benefits, and no less than 30 days of inpatient treatment in any benefit year. Maximum outpatient benefits limited to not less than \$1,000 during any benefit period.

A workshop to assist programs in obtaining third party reimbursements was developed by the Division and delivered in FY84. Because outpatient programs are still having a difficult time in generating revenue from third party sources, the Division again delivered a workshop during FY85 on billing and collecting from insurance companies with emphasis on billing for all eligible services, persistence and timely follow-up.

The Division expects all chemical dependency programs receiving public funds to generate a percentage of their total operating budget from client fees and 3rd party payments. All programs receiving discretionary funding have a service revenue requirement of 20% for Outpatient and Intermediate programs and 5% for reservation programs. This requirement will increase to 25% in FY87 for Outpatient and Intermediate programs.

4.0 SCOPE OF THE PROBLEM - STATEWIDE

4.1 Introduction

The Alcohol and Drug Abuse Division collects individual client treatment data using the computerized Alcohol and Drug Information System. Treatment data included in this plan is obtained from state-approved chemical dependency programs. Programs that are not state-approved do not report statistical information to the Division.

Data obtained from the Division's computerized reporting system is used to determine demographic and socio-economic information, usage trends, utilization rates, treatment outcomes and to identify high risk populations.

The Division also uses statistics and information obtained from the Montana Highway Patrol, Department of Health and Environmental Sciences, county plans, Montana Board of Crime Control, and other sources which provide an indication of chemical dependency related problems.

Alcoholism is one of the most serious health problems facing Montana today. It is an illness that can be arrested but not cured and can cause other serious diseases such as heart conditions and cirrhosis, all of which shorten the life span of their victims. Alcoholism impacts many areas of the state's concern from traffic fatalities to child abuse.

The National Institute on Alcohol Abuse and Alcoholism estimates that approximately 10 percent of the population are alcoholics or alcohol abusers. A report prepared for the Division by the Montana United Indian Association estimated that 70 percent of the Indian population is in need of alcoholism treatment services. [See Table 3 for estimated alcohol abusers by region].

4.2 Data Highlights and Trends

- ° Over 106,000 Montanans are estimated to suffer problem from alcohol use or misuse. Each alcohol abuser affects the lives of at least four others. This means that 424,000 Montanans from among the drinkers' families, friends, co-workers and employers indirectly suffer the effects of alcohol abuse. [See Table 3]
- ° State approved chemical dependency programs have averaged over 5,700 first admissions per year since 1980. [See Table 4].
- ° Treatment of youth 17 years and younger has increased from 7% of first admissions to state-approved programs in 1980 to 13% in 1984. Admissions for clients between the ages of 18-20 have increased from 8% of the treatment population in 1980 to 12% in 1984. First admissions of young adults between the ages of 21-25 have increased from 14% of the treatment population in 1980 to 19% in 1984. [See Table 5].
- ° Since more punitive DUI legislation was enacted in October 1981, first admissions to Montana's Court Schools for DUI offenders have more than tripled. [See Table 6].

- 50% of all persons killed on Montana highways in 1983 had been drinking and 56% of all drivers killed had been drinking prior to the accident. [See Table 7].
- According to Alcohol Epidemiologic Data System [contracted by NIAAA], Montana consistently ranks high nationally in alcohol beverage consumption and has averaged twelfth since 1980. [See Table 8].
- According to 1982 data published by the Bureau of Records and Statistics, accidents are the fourth leading cause of death in Montana following heart disease, cancer and strokes. Over half [54 percent] of the accidental deaths were attributable to motor vehicle accidents. Accidents involve younger people than those dying from heart disease, cancer and strokes and motor vehicle accidents involve even younger people than other types of accidents. Seventy-nine percent of all accidental deaths in the 15-24 year age group resulted from motor vehicle accidents; 55 percent of deaths from all causes in the 15-24 age group were from motor vehicle accidents.

Cirrhosis of the liver ranks as the fifth leading cause of death in the 25-44 year age group and fourth in the 45-64 year age group. [See Table 9].

- Montana has a serious multi-drug problem with a total of 1,409 admissions out of 6,649 first admissions for drugs other than alcohol in 1984. [See Table 10]
- Out of the 6,649 first admissions, 36% had a secondary problem with drugs other than alcohol and 23% had a tertiary problem with drugs other than alcohol.
- Marijuana is the most frequently reported drug of abuse followed by amphetamines and cocaine.

4.3 STATE OPERATED PROGRAMS - DATA HIGHLIGHTS

State Operated Programs

There are five chemical dependency programs operated by the state at four institutional settings. The Montana Alcohol Service Center, a 72 bed inpatient program and the Lighthouse Drug Treatment Center, a 15 bed long term inpatient drug treatment program, are located at the Montana State Hospital/Galen campus. The Montana State Hospital is part of the Department of Institutions Mental Health and Residential Services Division.

Correctional chemical dependency programs at Montana State Prison, Swan River Forest Camp and Pine Hills School for Boys are under programmatic and administrative supervision of the Department of Institution's Corrections Division. The chemical dependency counselors at these facilities report treatment information to the Alcohol and Drug Abuse Division on the computerized reporting system.

Data Highlights - Galen

- ° The Alcohol Service Center at Galen has averaged approximately 939 first admissions per year since 1980. Lighthouse admits approximately 35 clients per year. [See Tables 11-12].
- ° Treatment of clients between the ages of 18-20 at Galen's Alcohol Service Center has increased from 6 percent of the total treatment population in 1980 to 7 percent in 1984. Clients between the ages of 21-25 have increased from 14 percent of the treatment population in 1980 to 22 percent of the population in 1984. Lighthouse has consistently treated younger persons with 61 percent of their clients being younger than twenty-five.
- ° Since 1980 85 percent of clients admitted to the Alcohol Service Center were unemployed and had no insurance. Eighty-seven percent of clients admitted to Lighthouse were unemployed and 91 percent had no insurance. Because Galen is part of the state hospital they treat a high percentage of indigent clients.
- ° In 1984 community chemical dependency programs accounted for the largest number of referrals to the Alcohol Service Center [34%] followed by the courts [23%] and self-referrals [11%]. The majority of referrals to Lighthouse in 1984 came from self-referrals [33%], other chemical dependency programs [30%]. [See Tables 13-14].
- ° Since 1980, 71 percent of persons discharged from Galen's Alcohol Service Center completed treatment, 25 percent failed to complete treatment and 5 percent were referred elsewhere. Since 1982, 46 percent of persons discharged from Lighthouse completed treatment, 41 percent failed to complete treatment and 13 percent were referred elsewhere. [See Tables 15-16].

Data Highlights - Correctional Programs

- ° Correctional chemical dependency programs have averaged 146 admissions per year since 1982. [See Table 17].
- ° Fifty-six percent of the persons admitted to the correctional chemical dependency programs are under the age of 20 and 29 percent are between the ages of 21-25. Nineteen percent of the caseload are Native Americans.
- ° Sixty-seven percent of persons discharged from the chemical dependency correctional programs completed treatment, 15 percent failed to complete treatment and 13 percent were referred elsewhere. [See Table 18].

4.4 STATE INPATIENT BED NEED DETERMINATION

The Department of Institutions in conjunction with the Department of Health and Environmental Sciences and the Health Systems Agency developed a formula for the determination of the number of inpatient chemical dependency treatment beds needed in the state. Exhibit 4 shows the projected bed needs in FY85 for all 5 health planning regions.

TABLE 3

ESTIMATED ALCOHOL ABUSERS BY REGION

REGION	TOTAL POPULATION	POPULATION (Non-Indian)	ESTIMATED ABUSERS (Non-Indian)	POPULATION (Indian)	ESTIMATED ABUSERS (Indian)	TOTAL ABUSERS
I. Eastern	103,391	94,880	9,488 (10%)	8,511	5,958 (70%)	15,446

5.0 COUNTY PLAN SUMMARIES AND REGIONAL STATISTICS

5.1 Introduction

This chapter of the plan summarizes, by regional health planning regions, the FY86 updated county plans which were submitted to the Division in accord with 53-24-211 MCA [See Map - Exhibit 5]. County plans from each region have been analyzed according to 1) county plan service area, 2) statistical information, 3) gaps in services, 4) problems in delivering or obtaining services, 5) problems with DUI court schools, and 6) prevention activities. A summary of common problems, as identified in individual county plans, is also included for each region along with the obligation of FY 86 county earmarked tax monies.

As mentioned previously, all state-approved chemical dependency programs report client treatment data to the Alcohol and Drug Abuse Division on the computerized Alcohol and Drug Information System. These data have been summarized on a regional basis. When interpreting regional statistical reports it should be noted that all treatment data reflects only state approved programs and does not include statistical information from chemical dependency programs that are not state-approved.

I. REGION I PLAN SUMMARIES AND STATISTICS

Region I did not elect to revise service information or local statistics in their FY 86 updated plan.

A. Individual County Plan Summaries

County Plan

1. Service Area:

Carter, Custer, Fallon, Garfield, Powder River, Rosebud and Treasure counties.

Population: 33,031

a. Statistics:

- ° Number of alcohol and drug related arrests in FY83: 248
- ° Number of alcohol and drug hospital admissions in FY83: 130
- ° Number of DUI citations in FY83: 175

b. Gaps in Services:

- ° Need to increase 3rd party payments

Solution: Attend workshop on 3rd party payments; visit other programs that have developed 3rd party payment systems; request technical assistance from ADAD.

- ° Need to motivate recovering individuals to maintain long term quality sobriety rather than using their recovery programs as a means of becoming episodic drinkers.

MONTANA

HEALTH PLANNING REGIONS

Solution: A group is being organized to study the relapse syndrome and it is hoped new ways can be found to motivate people to achieve long term abstinence.

- In 1984 the abstinent per cent rate 6 months after discharge rose to 84%, a 6% increase over 1983.
- Need for transitional living services in Eastern Montana.

c. Problems in delivering or obtaining the following services:

- Outpatient - Lack of community involvement.
- Inpatient - There are no inpatient facilities in the District III service area.
- Detoxification - Hospitals in Miles City and satellite towns provide emergency detox. No problems.
- Transitional Living - Transitional living services needed in Eastern Montana.

d. Problems with DUI Court Schools:

- No court school referrals from Fallon and Carter counties.

Solution: Steps are being taken to find alternative funding sources to form task groups in these counties in order to foster community involvement.

In 1984, 4 DUI clients were admitted from Carter County and 9 from Fallon County.

e. Prevention

- Literature distribution, school presentations and workshops and seminars are provided by the District III Alcohol and Drug Program. Although media usage has been limited, the District III Program plans to greatly increase this prevention service by January 1984.

Problems - Time, money and training have been problems in developing a Minors in Possession program. Technical assistance is needed in order to begin this type of program.

County Plan

2. Service Area:

Dawson, Richland, McCone, Prairie and Wibaux counties.

Population: 29,273

a. Statistics:

- Number of alcohol and drug arrests for FY83: 528
- Number of alcohol and drug hospital admissions: Not available
- Number of DUI arrests: Not available

b. Gaps in Services

- ° Problems providing inpatient treatment for indigent clients - Travel to Galen is costly.
- ° Detoxification costs before client can be transported to Galen is done at cost of community.
- ° Family participation in treatment is difficult for clients that have gone to Galen because of distance and travel costs which decreases effectiveness of treatment.

Solution: ADAD should consider contracting with an inpatient treatment center for a certain number of low income beds for use by Eastern Montana.

c. Problems in delivering or obtaining the following services:

- ° Outpatient - Need co-facilitators for intensive therapy groups.
- ° Inpatient - See gaps in services.
- ° Detoxification - Provided by community hospitals.
- ° Transitional Living - Need for transitional living facilities in Eastern Montana.

d. Problems with DUI Court Schools:

- ° No problems at this time.

e. Prevention

- ° Literature distribution, school presentations, workshops/seminars, media ads and a Minors in Possession program are provided by the District II Alcohol and Drug Program. No problems were mentioned.

County Plan

3. Service Area:

Phillips, Valley, Daniels, Sheridan and Roosevelt counties.

Population: 34,269

a. Statistics:

- ° Number of alcohol and drug related arrests in FY 83: 1,558
- ° Number of alcohol and drug hospital admissions in FY 83: 292

b. Gaps in Services:

- o District I states that it needs to increase the number of Native Americans served.

Solution: To try and remedy this problem, counselors and the Director of District I will make greater efforts to establish better understanding and working relationships with both Fort Peck and Fort Belknap through meetings and workshops.

In 1984 District I increased Native American admissions from 6% to 15%.

c. Problems in Delivering or Obtaining the Following Services:

- o Outpatient - Difficulty keeping counselors in all five counties.

Solution - To improve community coordination by initiating a series of meetings in each county with representatives of community based agencies. By collection of fees-for-services to generate enough revenue to hire an educator to work in the schools thereby allowing counselors more direct service time.

- o Inpatient - The cost of transporting indigent or low income clients to treatment is a severe burden.

- o Detoxification - Transportation costs involved with transporting clients.

- o Transitional Living - There is a need for transitional living facilities in Eastern Montana.

d. Problems with DUI Court Schools:

- o The biggest DUI problem lies in Roosevelt County and on the Fort Peck Indian Reservation; however, only 12% of D.U.I.'s issued during July 1982 to June 1983 enrolled in DUI court school. There is a need for a better working relationship with the Roosevelt County judicial system.

Solution: To set up more workshops and educational sessions with Tribal Law Enforcement and the judicial system. To establish better working relationships with the Fort Peck Alcohol program.

In 1984 Native American DUI admissions increased from 8% to 11%.

e. Prevention

- o Literature distribution, school presentations, workshops and media ads are provided by the District I Alcohol and Drug Program. No problems were mentioned.

B. Summary of Region I County Chemical Dependency Plans and Obligation of FY86 County Tax Monies

1. Common needs and Problems

- o There is a problem in providing inpatient treatment for indigent clients in Eastern Montana because of the distance to Galen which results in high transportation costs and lack of family involvement in treatment.

- ° All plans support the need for a transitional living facility in Eastern Montana. Many of the clients completing Inpatient treatment programs need a structured living arrangement and group support provided by a transitional living facility.

2. Obligation of County Earmarked Tax Monies for FY86.

- 1) Carter - 100% to District III Alcohol and Drug Program - Outpatient
- 2) Custer - 100% to District III Alcohol and Drug Program - Outpatient
- 3) Daniels - 100% to District I Alcohol and Drug Program - Outpatient
- 4) Dawson - 100% to District II Alcohol and Drug Program - Outpatient
- 5) Fallon - 100% to District III Alcohol and Drug Program - Outpatient
- 6) Garfield - 100% to District III Alcohol and Drug Program - Outpatient
- 7) McCone - 100% to District II Alcohol and Drug Program - Outpatient
- 8) Phillips - 100% to District I Alcohol and Drug Program - Outpatient
- 9) Powder River - 100% to District III Alcohol and Drug Program - Outpatient
- 10) Prairie - 100% to District II Alcohol and Drug Program - Outpatient
- 11) Richland - 100% to District II Alcohol and Drug Program - Outpatient
- 12) Roosevelt - 100% to District I Alcohol and Drug Program - Outpatient
- 13) Rosebud - 100% to District III Alcohol and Drug Program - Outpatient
- 14) Sheridan - 100% to District I Alcohol and Drug Program - Outpatient
- 15) Treasure - 100% to District III Alcohol and Drug Program - Outpatient
- 16) Valley - 100% to District I Alcohol and Drug Program - Outpatient
- 17) Wibaux - 100% to District II Alcohol and Drug Program - Outpatient

C. Region Statistics and Data Highlights

1. Primary Client Characteristics at Admission [See Table 19].

- ° Region I has averaged 856 first admissions per year since 1980.
- ° The percent of women entering treatment in Region I has increased from 24% of first admissions in 1980 to 35% in 1984.
- ° Treatment of youth 17 years and younger has increased from 5% of first admissions in 1980 to 12% in 1984. Admissions for clients between the ages of 18-20 have increased from 7% in 1980 to 11% in 1984.

- 52% of the persons admitted to Region I programs had some type of employment at the time of admission and 61% had insurance.

2. Family Member Characteristics at Admission [See Table 20]

- Region I has averaged 547 first admissions of family members per year since 1980.
- The majority of family members admitted as clients are women, comprising approximately 74% of the total admissions since 1980.
- It is significant to note that 16% of family clients were under the age of seventeen at the time of admission which suggests that Region I programs are impacting the children of chemically dependent persons.
- 51% of family members were employed at admission and 74% had some type of insurance.

3. DUI Client Characteristics at Admission [See Table 21]

- DUI court school client admissions have increased from 157 admissions in 1980 to 483 in 1984. This increase reflects the statewide trend which has resulted from stiffer DUI legislation enacted in October 1981.
- Since 1980, approximately 90% of the total admissions have been men.
- 57% of clients admitted to DUI court schools are under 30 years of age.
- 83% of clients admitted to DUI court schools were employed at the time of admission and 58% had some type of insurance.

4. Source of Referral at Admission [See Table 22]

- In 1984, other sources accounted for the largest number of referrals to Region I programs [22%], followed by courts [13%] and self-referrals [12%].

5. First Admissions to Chemical Dependency Programs by County of Residence and Admission Rates Per Thousand [See Table 23]

- Admission rates per thousand based on first admissions to state-approved chemical dependency programs by county of residence show that in 1984 Rosebud County had the highest rate [17.6] followed by Dawson County [11.3] and Richland County [10.6]. The admission rate per thousand for all counties in Region I was 8.3 in 1984 compared with the statewide rate of 8.4.

6. Reason For Discharge [See Table 24]

- Since 1980, 53% of the primary clients discharged from Region I programs completed their treatment plans, 33% failed to complete treatment with the highest year being 1984 when 42% of the clients did not complete treatment. Seven percent of the clients since 1980 were discharged because they moved and 8% were referred elsewhere.

7. Primary Client Follow-up Information [See Table 25]

- ° All state-approved programs are required to do follow-up, for the purpose of determining treatment effectiveness, 6 months after the client's treatment plan has been completed. Chemical dependency programs in Region I have attempted to follow-up 785 clients since 1980 and successfully contacted 540 [69%].
- ° Of the 540 successful follow-up contacts, 55% indicated they were involved in AA or a maintenance program, 66% were employed and 73% reported total abstinence.
- ° The percent of clients reporting total abstinence 6 months after discharge increased from 65% in 1980 to 84% in 1984.

Primary Client Follow-up Information
Six Months After Discharge

Calendar Years 1980 - 1984

	1980	1981	1982	1983	1984
Number of Follow-up Attempts	86	155	129	175	240
Number of Successful Follow-up Contacts	72	94	78	121	175
Percent Contacted	84%	61%	60%	69%	73%
Percent in a Maintenance Program	49%	59%	51%	58%	58%
Percent Employed	56%	72%	59%	72%	71%
Percent Abstinent	65%	68%	71%	78%	84%

II. REGION II PLAN SUMMARIES AND STATISTICS

Region II did not elect to update local statistics in their FY 86 updated plan.

A. Individual County Plan Summaries

County Plan

1. Service Area

Hill, Blaine, Liberty, Toole, Chouteau counties.

Population: 38,912

a. Statistics

- Number of alcohol and drug related arrests within counties:

	<u>FY 83</u>
Blaine	88
Chouteau	82
Hill	86
Liberty	4
Toole	106

- Number of alcohol and drug admissions to hospitals within counties:

	<u>FY 83</u>
Blaine	0
Chouteau	3
Hill	9
Liberty	5
Toole	16

- Number of DUI's issued in counties:

	<u>FY 83</u>
Blaine	43
Chouteau	38
Hill	88
Liberty	10
Toole	67

b. Gaps in Services

- Extended care facilities are not available in the area.

Solution: Hill Top Recovery will examine the possibility of developing such service capabilities.

c. Problems in delivering or obtaining the following services:

Fort Belknap no longer provides inpatient or outpatient services.

- Detoxification - No problems identified.
- Transitional Living - No problems identified.

d. Problems with DUI court schools

No Problems identified.

e. Prevention

Literature distribution, school presentations, workshops/seminars, media ads and a Minor in Possession program are provided by approved programs in the service area. No problems were mentioned.

1. County Plan Service Area

Cascade

a. Statistics

- Number of alcohol and drug related arrests for FY83:

The Cascade County Sheriff reported:

- 5 unlawful possession of alcohol
- 7 unlawful or contributing to the delinquency of a minor
- 51 dangerous drugs

The Chief of Police reported:

- 225 arrests related to minors in possession
- 38 narcotic arrests

- Number of alcohol and drug admissions to hospitals for FY83: 48

- Number of DUI's issued in county for FY83:

- Sheriff's office: 138 adult DUI bookings
- Chief of Police: 271 DUI arrests

b. Gaps in Services

- Need for transitional living facility
- Consistent adolescent assessments among service providers
- Native American addiction needs great emphasis

Solution: Development of needed facilities through private capital. Funding for transitional living facilities is difficult because third party payers don't recognize halfway houses as a continuance of treatment.

c. Problems in Delivering or Obtaining the Following Services:

- o Outpatient - No major problems.
- o Inpatient - No problems.
- o Detoxification - Occasionally transportation is a problem.
- o Intermediate care - Clients must be referred to Billings, Missoula or Helena.

d. Problems with DUI Court Schools

No problems identified.

e. Prevention

Literature distribution, school presentations, workshops/seminars, media ads and a Minors in Possession program are provided by state-approved chemical dependency programs in this service area. No major problems identified.

B. SUMMARY OF REGION II COUNTY CHEMICAL DEPENDENCY PLANS AND OBLIGATION OF FY86 COUNTY TAX MONIES

1. Common needs and problems

Both county plans from Region II support the need for transitional living or extended care facilities.

2. Obligation of County Earmarked Tax Monies for FY86

- | | | | |
|----|----------|---|---|
| 1) | Blaine | 50% to Hill Top Recovery - 50% to Fort Belknap -
[Intermediate care, detoxification] | |
| 2) | Cascade | 100% to Providence Alcoholism Center | |
| 3) | Chouteau | 100% to Hill Top Recovery | |
| 4) | Hill | 100% to Hill Top Recovery | |
| 5) | Liberty | 100% to Hill Top Recovery | |
| 6) | Toole | 100% to Hill Top Recovery | |
| * | 7) | Glacier | 50% to Boyd Andrew Service Center - outpatient |
| | | | 50% to Medicine Pine Lodge - detoxification |
| * | 8) | Pondera | 100% to Boyd Andrew Service Center - outpatient |

* See Region IV plan summaries.

C. Region II Statistics and Data Highlights

1. Primary Client Characteristics at Admission [See Table 26]

- ° Region II has averaged 800 first admissions per year since 1980.
- ° The percent of women entering treatment in Region II has increased from 21% of the first admissions in 1980 to 32% in 1984.
- ° Treatment of youth 17 years and younger has increased from 3% of first admissions in 1980 to 9% in 1984; in 1982 this population accounted for 8% of all admissions. Admission of clients between the ages of 18-20 has increased from 6% of the first admissions in 1980 to 9% in 1984; in 1982 this age group accounted for 14% of all admissions. Clients in the age group of 21-25 have increased from 16% of Region II program admissions in 1980 to 20% in 1984.
- ° Since 1980, only 33% of the persons admitted to Region II programs were employed and 45% had insurance.

2. Family Member Characteristics at Admission [See Table 27]

- ° Region II has increased the number of family members admitted for treatment from 51 first admissions in 1980 to 730 in 1984.
- ° Although the majority of family members admitted as clients are women [approximately 80% of admissions since 1980] there appears to be a trend that more men are seeking treatment as family members as evidenced by the fact that in 1980 men comprised only 12% of the total family member admissions compared with 30% in 1984.
- ° It is significant to note that 13% of family clients are under the age of seventeen which suggests that Region II programs are impacting children of chemically dependent persons.
- ° 50% of the family clients were employed at admission and 77% had some type of insurance.

3. DUI Client Characteristics at Admission [See Table 28]

- ° DUI court school client admissions have increased from 108 first admissions in 1980 to 668 admissions in 1984. This increase reflects the statewide trend which has resulted from stiffer DUI legislation enacted in October 1981.
- ° Since 1980, 83% of the admissions to DUI court schools were men; however, the number of women admitted to Region II court school programs has increased from 13% of the total admissions in 1980 to 19% in 1984.
- ° 50% of clients admitted to DUI court schools are under 30 years of age.

- 70% of clients admitted to DUI court schools were employed at the time of admission and 50% had insurance.
4. Source of Referral at Admission [See Table 29]
- In 1984, the majority of referrals to Region II programs were reported to be court-referrals [20%], followed by self-referrals [16%] and referrals from other chemical dependency programs [14%].
5. First Admissions to Chemical Dependency Programs by County of Residence and Admission Rates - Per Thousand [See Table 30]
- Admission rates per thousand, based on first admissions to state-approved chemical dependency programs by county of residence show that in 1984 Blaine County had the highest rate [12%] in Region II followed by Glacier County [11%] and Hill County [9%]. The admission rate per thousand for all counties in Region II was 7.3% in 1984 compared with the statewide rate of 8.4. Region II has consistently had a lower rate per thousand than the statewide average.
6. Reason for Discharge [See Table 31]
- Since 1980, 53% of the primary clients discharged from Region II programs completed their treatment plans, 36% failed to complete treatment, 4% were inaccessible or moved and 6% were referred elsewhere.
7. Primary Client Follow-up Information [See Table 32]
- All state-approved programs are required to do follow-up, for the purpose of determining treatment effectiveness, 6 months after the client's treatment plan has been completed. Chemical dependency programs in Region II have attempted to follow-up 1,581 clients since 1980 and successfully contacted 708 [45%].
 - Of the 708 successful follow-up contacts since 1980, 39% indicated they were involved in AA or a maintenance program, 47% were employed and 62% reported total abstinence.
 - The number of successful follow-up contacts in Region II has increased from 41% in 1980 to 54% in 1984; however, the percent of discharged clients indicating that they were involved in a maintenance program at the time of follow-up decreased from 56% in 1980 to 35% in 1984 and percent employed at follow-up decreased from 64% in 1980 to 43% in 1984.

III. REGION III PLAN SUMMARIES AND STATISTICS

A. Individual County Plan Summaries

1. County Plan Service Area

Big Horn county
Population: 11,096

Big Horn County did not report any statistical or service changes in their FY 86 county update plan.

a. Statistics

- ° Number of alcohol and drug related arrests: It has been estimated by the Big Horn County sheriff that approximately 95 percent of arrests during FY82 were a result of chemically induced behavior. The sheriff further indicates that these statistics are conservative since much of the data on prevalence of alcohol-related spouse and child abuse remains unreported.
- ° Number of alcohol and drug admissions to hospitals in county: Statistics relating to chemical dependency admissions to the county hospital are unavailable.
- ° Number of DUI's issued in county: The number of DUI's issued in the county was not reported, however, the Big Horn County DUI court school taught a total of 145 students during 1984.

b. Gaps in Services

- ° High visibility of the chronic alcoholic.

Solution: Possible solutions are the introduction of the Salvation Army into the Hardin area, a recovery house which would deal with long term recovery of a small number of patients, or a state certified county detox program.

- ° Need for increased awareness as to the complexity of chemical awareness.

Solution: To provide accurate information to knowledgeable professionals, para-professionals and the citizenry at large and to work with schools.

- ° Aftercare is a need because very few individuals come to the aftercare group from the Hardin area and few referrals are received from treatment centers that are returning clients to the area.

Solution: Cultivate a closer relationship with treatment centers and consider extending aftercare to other areas within the county.

- ° An adequate assessment process is needed for chemically dependent adolescents.

Solution: Additional personnel is needed to effectively meet this need.

- Increased coverage for outpatient treatment services; an individual is needed to work closely with the legal, medical, and educational facilities in Big Horn County.

Solution: Additional personnel is needed to accomplish this goal.

- Transitional living and detox facility is needed.

Solution: Continuation of discussion involving groups of Big Horn County citizens and proposals to commissioners involving these concerns.

c. Problems in Delivering or Obtaining the Following Services:

- Outpatient - The only identifiable problem is not being able to follow-up on referrals from treatment centers. This is a two-fold problem: not getting the information that clients are returning to this area and second, if the information is received, many referrals do not come in for additional treatment.

Solution: The strategy is to cultivate better working relationships with treatment centers. This will be to increase face-to-face interaction as well as more effective phone and better communications with treatment centers. This will also include increasing responsibilities from the outpatient services to inpatient staff.

- Inpatient - A regional alternative to Calen State Hospital for free care for caucasian chemically dependent clients would possibly provide more efficient, effective services.

Solution: Regionalized state treatment centers would provide inpatient services at locations closer to the client's home.

- Detoxification - No problems.

- Transitional Living - Facilities are not available to meet the needs of transitional living in Big Horn County.

Solution: The county plan states that Big Horn County is not aware of a solution to the need of transitional living.

d. Problems with DUI Court Schools

There are no major problems at this time.

e. Prevention

- Literature distribution, school presentations, workshops/seminars, media ads and a Minors in Possession program all provided by Big Horn County Chemical Dependency Program.

2. County Plan Service Area

Carbon County
Population: 8,099

Carbon County did not address local statistics or services changes in their FY 86 updated plan.

a. Statistics

- ° Number of alcohol and drug related arrests: Approximately 72 cases with noted alcohol and drug involvement were seen by the City Judge and J.P.'s in FY83.
- ° Number of alcohol and drug related hospital admissions: It is estimated by Carbon County Memorial Hospital that approximately 15 patients are admitted each year with problems directly related to chemical abuse.
- ° Number of DUI's issued in county: Thirty-seven DUI clients were seen by the Carbon County Alcohol and Drug Program in 1984.

b. Gaps in Services

- ° The needs of the aged population are not being met. Staffing with nursing home personnel, and offers for training of nursing home personnel have not been productive. Attempts to get speaking time with Senior Citizen groups have not worked to date.

Solution: The plan is to continue with above as well as with radio Public Service announcements and newspaper coverage.

c. Problems in Delivering or Obtaining The Following Services:

- ° Outpatient - No problems listed.
- ° Inpatient - No problems listed.
- ° Detoxification - No problems listed.
- ° Transitional Living - The major problem related to referral remains arranging for transportation of clients to settings outside of Carbon County.

Solution: The AA community and the Carbon County Welfare continue to help by providing some transportation for clients in need.

d. Problems with DUI Court Schools:

No problems listed.

e. Prevention:

- ° Literature distribution, school presentations, workshops/seminars, media ads and a Minors in Possession program are provided by the South Central Alcohol and Drug Program Carbon County satellite.

3. County Plan Service Area

Fergus, Judith Basin, Petroleum and Wheatland counties.
Population: 18,731

The FY 1986 updated county plans did not address changes in local statistics. Treatment services remain the same.

a. Statistics:

- ° Number of alcohol and drug related arrests: Fergus County Sheriff estimates 38% of their total arrests are alcohol related. Estimates from other law enforcement personnel, as documented in several letters in the county plan, indicate that this estimate is conservative. All law enforcement people report that a very large number of calls received by their departments do not result in arrests but are in fact alcohol/drug related.
- ° Number of alcohol and drug admissions to hospitals: There were 402 admissions to Central Montana Hospital and Wheatland Memorial Hospital with alcohol/drug related problems.

b. Gaps in Services

- ° No gaps in services were mentioned.

c. Problems in delivering or obtaining the following services:

- ° Outpatient - No problems
- ° Inpatient - No problems
- ° Detoxification - No problems
- ° Transitional Living - No problems

d. Problems with DUI court schools

No problems identified.

e. Prevention

- ° Literature distribution, school presentations, workshop/seminars and media ads are provided within the four county area by Alcohol and Drug Services of Central Montana. No problems were mentioned.

4. County Plan Service Area

Musselshell and Golden Valley counties.

Population: 5,455

The FY 1986 updated county plans did not address local statistics. Treatment services remain the same.

a. Statistics

- ° Number of alcohol and drug related arrests within counties: 275 in FY83
- ° Number of alcohol and drug hospital admissions within counties: None.
- ° Number of DUI's issued in counties: 51 in FY83.

b. Gaps in Services

- ° The county plan states that more manpower is needed to ensure someone is always available during office hours to answer crisis calls, requests for information, and other business when the counselor is out of the office.

Solution: This problem has hopefully been resolved by the Board's decision to hire a part-time secretary to work in the Roundup office.

c. Problems in delivering or obtaining the following services

- ° Outpatient - Obtaining mental health counseling for clients in Golden Valley is a problem. Clients are referred to services in Musselshell or Yellowstone counties. Client must pay the full fee of \$45.00 per hour because Golden Valley has no agreement for mental health support.

Solution: Continued lobbying of Golden Valley County Commissioners to persuade them to get the mental health program back into the county.

- ° Inpatient - Funding for transportation to treatment facilities and fees for treatment for those without insurance or ability to pay is a problem.

Solution: A partial solution would be better utilization of Galen and more dependence on AA members for transportation. Another solution is stronger appeals to family members for financial help and a more thorough investigation of 3rd party payments.

- ° Detoxification - Funding for transients or other clients unable to pay for hospital care is a problem.

- ° Transitional Living - No problems identified.

d. Problems with DUI court schools

- ° The only problem is that some law enforcement personnel are not issuing DUI citations.

e. Prevention

- ° Literature distribution, school presentations, workshops/seminars and a Minors in Possession program is provided by Musselshell/Golden Valley Alcohol and Drug Program. No problems mentioned.

5. County Plan Service Area

Sweet Grass County

Population: 3,216

No change in services or local statistics is indicated in the FY 1986 updated county plan.

On July 1, 1985 the Sweetgrass County Program at Big Timber became a satellite office of the Southwest Chemical Dependency Services of Park County with headquarters in Livingston.

a. Statistics

- ° Number of alcohol and drug related arrests: According to the local sheriff's department 80%-90% of all arrests and calls are alcohol and drug related.
- ° Number of alcohol and drug admissions to hospitals in county: It is hard to establish firm figures of hospital admissions related to chemical abuse because admissions show primary physical complaints and diagnosis, not necessarily the cause.
- ° Number of DUI arrests within county: Not reported.

b. Gaps in Services

- ° The community lacks a formal support and referral system through the schools for children from alcoholic families.

Solution: Program officials intend to look at other school districts to learn how to teach educators and administrators to recognize children from alcoholic families and to respond appropriately. Also, the county psychologist has offered to assist the program counselors to help run group counseling sessions for children of alcoholics.

c. Problems in delivering or obtaining the following services:

- ° Outpatient - No identified problems except that which was explained under Gaps in Services.
- ° Inpatient - The major problem with inpatient services available through Galen State Hospital and the VA hospitals is the waiting list for admittance to the facilities which can be up to 10-14 days.

Solution: The problem of long waits at Galen and VA hospitals cannot be remedied from this level. Program officials would encourage State authorities to pressure legislators to provide the necessary funding to increase capacities.

- ° Detoxification - No problems.
- ° Transitional Living - No problems.

d. Problems with DUI court schools

- ° There are no problems with the DUI court school in Sweet Grass County.

e. Prevention

- ° Literature distribution, school presentations, media ads and a Minors in Possession program are provided by the Sweet Grass County Chemical Dependency Program.

Problem: Budget restrictions preclude the setting up of workshops/seminars in Sweet Grass County since expenses would have to be paid to experts from outside the community to put on such programs.

Solution: Program officials feel that presentations made by the Program Counselor/Administrator to service groups and schools are an effective way of reaching the general public.

6. County Plan Service Area

Stillwater County

Population: 5,500

The FY 1986 updated county plan indicates no changes have occurred since the previous year.

a. Statistics

- ° Number of alcohol and drug related arrests: Not addressed.
- ° Number of alcohol and drug hospital admissions: Not addressed.
- ° Number of DUI's issued in county: Not addressed.

b. Gaps in Services

- ° Chemical education for physicians.

Solution: Do presentations, workshops and/or provide inservice training, as requested.

- ° Specifically outlined procedure between doctors, Stillwater Community Hospital and the chemical dependency counselor for the treatment of chemically dependent patients admitted for detoxification is needed.

Solution: Meet with hospital representatives to outline specific needs. Research established procedures and adopt a specifically outlined procedure acceptable to Stillwater County Hospital.

- ° Prevention, education and support services for youth such as Alateen and facilitation of school education programs for all county schools.

Solution: Meet with youth, parents, school board and school personnel to outline specific needs. Aid in facilitating an Alateen group. Aid in facilitating educational programs in county school.

- An intervention program with County schools for youths suffering from chemical dependency or chemical dependency-related problems is needed.

Solution: Research other operating programs. Meet with the county school board and county school personnel to plan and implement an instruction program to meet individual school's needs.

- Primary co-dependency education is needed for women and families.

Solution: Research and initiate news articles and a workshop to aid and educate co-dependent women and families.

c. Problems in delivering or obtaining the following services:

- Outpatient - No problems
- Inpatient - No problems
- Detoxification - No problems
- Transitional Living - No problems

d. Problems with DUI court schools

- No problems listed.

e. Prevention

- Literature distribution, media ads, and a Minors in Possession program are provided by the Stillwater Alcohol and Drug program satellite.

Problem: School presentations and workshops/seminars are currently unavailable. The plan indicates these are "in the planning stage."

7. County Plan Service Area

Yellowstone County

Population: 104,000

Changes in the FY 86 updated county plan are addressed under 7c, solutions to problems in delivering treatment services.

a. Statistics

- Number of alcohol and drug related arrests within county: Local legal system officials indicate alcohol abuse is the key factor in 60 percent of the cases handled by county courts and welfare system.
- Number of alcohol and drug admissions to hospitals in county: Not reported.
- Number of DUI's issued in county: Not reported; however, Rimrock Foundation reported 502 DUI court school clients for FY83.

b. Gaps in Services

- ° Transitional living is no longer provided. The declining census in the Big Sky Halfway House, minimal reimbursement for this level of care, and increased standards reduced cost effectiveness to unacceptable levels.
- ° Extended long-term care for the chronically chemically disabled is an unmet need. While the percent needing this level of care is not large, those who are in need [1%] have no alternatives.

Unmet service needs are largely a function of the lack of reimbursement.

c. Problems in delivering or obtaining the following services

- ° Outpatient - No problems identified.
- ° Inpatient - No problems identified.
- ° Detoxification - The bed capacity and physical plant [Rimrock Foundation] limits the scope of the service.

There is a serious need for legislation allowing police/treatment staff to restrain highly intoxicated patients and prevent them from leaving detox services while still a danger to themselves and others.

Solution: It is anticipated that bed capacity will be remedied with the completion of Rimrock's new facility. In 1984 the number of inpatient beds was increased to 31. Sixteen additional beds will be added in 1985. Detoxification beds have been increased to 8.

- ° Transitional Living - See section of Gaps in Services.

d. Problems with DUI court schools

- ° No problems identified.

e. Prevention

- ° Literature distribution, school presentations, workshops/seminars and media ads are provided by Rimrock Foundation and South Central Mental Health Center. Local judges do not favor implementing a Minors in Possession Program at this time.

Solution: At the discretion of the judges, Rimrock will accept adolescents being processed for possession, assess them and provide either DUI program or the outpatient 8 week assessment and education program.

B. Summary of Region III County Chemical Dependency Plans and Obligation of FY86 County Tax Monies

1. Common Needs and Problems

- ° Transportation to treatment facilities and obtaining treatment for indigent clients was mentioned as a problem in three plans. The waiting list for admittance to Calen was also delineated as a problem in obtaining treatment services for indigents.
- ° Three plans noted a gap in the continuum of care due to a lack of transitional living facilities.

2. Obligation of County Earmarked Tax Monies for FY86

- 1) Big Horn
100% to Big Horn County Chemical Dependency Program - outpatient
- 2) Carbon
100% to South Central Montana Alcohol and Drug Program - outpatient
- 3) Fergus
100% to Alcohol and Drug Services of Central Montana - outpatient
- 4) Golden Valley
100% to Musselshell/Golden Valley Alcohol and Drug Program - outpatient
- 5) Judith Basin
100% to Alcohol and Drug Services of Central Montana - outpatient
- 6) Musselshell
100% to Musselshell/Golden Valley Alcohol and Drug Program - outpatient
- 7) Petroleum
100% to Alcohol and Drug Services of Central Montana - outpatient
- 8) Stillwater
100% to South Central Montana Alcohol and Drug Program - outpatient
- 9) Sweet Grass
100% to Southwest Chemical Dependency Program - outpatient
- 10) Wheatland
100% to Alcohol and Drug Services of Central Montana - outpatient
- 11) Yellowstone
83% to Rimrock Foundation [80% - detoxification - 20% outpatient]
12% to Southcentral MH Alcohol and Drug Program - outpatient
5% to Contingency Fund [to be divided 83%, 12% at the end of the year to Rimrock and Southcentral]

C. Region III Statistics and Data Highlights

1. Primary Client Characteristics at Admission [See Table 33].

- Region III has averaged 972 first admissions per year since 1980.
- The percent of women entering treatment in Region III has increased from 26% of the admissions in 1980 to 30% in 1984.
- The treatment of youth 17 years and younger has averaged 8% of the total first admissions since 1980 and admissions for persons 18-20 has averaged 9%. Treatment of persons in the 21-25 year age group has increased from 11% of the admissions in 1980 to 16% in 1984.
- 47% of the persons admitted to Region III program in 1984 had some type of employment at the time of admission; however, since 1982 only 49% had insurance.

2. Family Member Characteristics at Admission [See Table 34].

- Region III has consistently admitted approximately 350 family member clients per year.
- The majority of family member clients admitted in Region III are women accounting for 78% of the family member treatment admissions since 1980.
- Since 1980, approximately 16% of family admissions have been 17 years of age or younger which suggests that Region III programs are impacting children of chemically dependent persons.
- 47% of the family members admitted for treatment in 1980 were employed at admission compared with 65% in 1984. Approximately 80% of family member clients had some type of insurance.

3. DUI Court School Client Characteristics at Admission [See Table 35].

- DUI court school client admissions have increased from 360 admissions in 1980 to 845 admissions in 1984. This increase reflects the statewide trend which has resulted from stiffer DUI legislation enacted in October 1981.
- Since 1980, 85% of the admissions to DUI court schools were men; however, the number of women admitted to Region III court school programs has increased slightly from 12% of the client population in 1980 to 18% in 1984.
- 53% of clients admitted to DUI court schools are under 30 years of age.
- 72% of clients admitted to DUI court schools were employed at the time of admission and 61% had insurance.

TABLE 39

REGION III

Primary Client Follow-up Information
Six Months After Discharge

Calendar Years 1980 - 1984

	1980	1981	1982	1983	1984
Number of Follow-up Attempts	93	155	499	569	562
Number of Successful Follow-up Contacts	45	94	167	210	196
Percent Contacted	48%	61%	34%	37%	35%
Percent in a Maintenance Program	62%	59%	57%	55%	60%
Percent Employed	58%	56%	65%	66%	66%
Percent Abstinent	82%	73%	82%	79%	74%

4. Source of Referral at Admission [See Table 36].

In 1984, the majority of referrals to Region III programs were reported to be self referrals [27%], followed by referrals from courts [11%], and referrals from family members [10%].

5. First Admissions to Chemical Dependency Programs by County of Residence and Admission Rates Per Thousand [See Table 37].

- Admission rates per thousand, based on first admissions to state-approved chemical dependency programs by county of residence show that in 1984 Big Horn and Yellowstone counties had the highest rates [13.3] and [7.6] followed by Carbon County [7.2]. Region III has had a slightly lower rate per thousand than the statewide rate of 8.4.

6. Reason For Discharge [See Table 38].

- The number of clients completing their treatment plans in Region III has increased from 42% in 1980 to 55% in 1984. Clients failing to complete treatment have averaged 39%, and those clients discharged because of inaccessibility have averaged 3%. Clients referred elsewhere have decreased from 15% of all discharges in 1980 to 3% in 1984.

7. Primary Client Follow-up Information [See Table 39].

- All state-approved programs are required to do follow-up, for the purpose of determining treatment effectiveness, 6 months after the client's treatment plan is completed. Chemical dependency programs in Region III have attempted to follow-up 1,878 clients since 1980 and successfully contacted 712 [38%].
- Of the 712 successful follow-up contacts since 1980, 59% indicated they were involved in AA or a maintenance program, 62% were employed and 78% reported total abstinence.
- The number of persons employed at the time of follow-up has increased from 58% in 1980 to 66% in 1984.

IV. REGION IV PLAN SUMMARIES AND STATISTICS

A. Individual County Plan Summaries

1. County Plan Service Area

Beaverhead and Madison counties on February 1, 1985 contracted with Southwest Chemical Dependency Services of Park and Meagher Counties creating a four county service area.

Population: 13,934

a. Statistics:

Local Statistics were not updated in the FY 1986 plan.

° Number of alcohol and drug related arrests within county for FY83:

Beaverhead - 604 total arrests. Both the Chief of Police and Sheriff stated that 80% of all arrests made were indirectly or directly related to chemical abuse.

Madison - 225 total arrests. Law enforcement stated that 80% were alcohol related.

° Number of alcohol and drug admissions to hospitals in counties for FY83:

Beaverhead - 26
Madison - 23

° Number of DUI's issued within counties for FY83:

Beaverhead - 86
Madison - 25

b. Gaps in Services

° The county plan states that program staff is not adequate to handle all the problems that are revolving around alcohol.

Solution: The plan states that the only solution for bridging the gaps in services is to approach ADAD for funds to increase staff personnel.

c. Problems in delivering or obtaining the following services:

° Outpatient - Understaffing and inadequate funding to run an alcohol and drug program for outpatient services. There is a problem providing outpatient services to outlying areas due to lack of funding.

° Inpatient - There is a problem obtaining inpatient services for low income and indigent clients. The plan states that Galen is often full. The plan also states an inpatient facility is needed specifically for Beaverhead and Madison counties.

° Detoxification - The only detoxification available in Madison and Beaverhead counties is Galen. Transportation costs are a problem.

- Transitional Living - The plan states that transitional living facilities are needed in this area because of the transient population.

Solution for solving service delivery problems: Request funding from the Department of Institutions.

d. Problems with DUI court schools

- The plan states that the court school needs to be standardized in procedure and charges. The plan also mentions that one of the main problems is that outlying communities are ticketing people for DUI offenses but the outpatient program does not get them because of transportation involved in getting the person to and from the court school. The program director feels that full client credit should be given to each court school participant.

e. Prevention

- Literature distribution, school presentations, workshops/seminars are provided on a limited basis because of lack of funding and staff. A Minors in Possession project is ongoing as part of the school system's curriculum.

2. County Plan Service Area

Park and Meagher Counties. As of February 1, 1985, combined with Madison and Beaverhead Counties.

Population: 15,023

a. Statistics

Local statistics were not updated in the FY 1986 plan.

- Number of alcohol and drug related arrests for FY83:

- Park County - 449
- Meagher County - 13

- Number of alcohol and drug related admissions to hospital for FY83:

- Park County - 53
- Meagher County - 11

- Number of DUI's issued in county for FY83:

- Park County - 109
- Meagher County - 7

b. Gaps in Services

- Funds for emergency detox at Livingston Memorial Hospital. Distance to Galen is costly.

Solution: Center staff have partially resolved this problem by working more closely with Park County Human Services and discussions with members of the hospital Board and local physicians.

- ° Due to limited staff, budget restrictions, staff time and lack of appropriate facilities, outreach has been limited.

Solution: The program has explored sources for additional funds and has discussed using appropriate facilities with organizations who own them. If staff time becomes available.

- ° Transitional Living Services - Since closure of the transitional living facility in Livingston this service has been, for all practical purposes, unavailable to program clients.

Solution: The program would appreciate assistance from ADAD in assessing the practicality and, if appropriate, pursuing funding to re-establish this service.

c. Problems in delivering or obtaining the following services:

- ° Outpatient - None.
- ° Inpatient - Distance and transportation costs are major problems. The program has, at times, experienced a lack of communication and/or miscommunication with Galen.

Solution: Perhaps Galen could provide updated information on treatment slots available on a bi-weekly or monthly basis and their admission criteria.

- ° Detoxification - The problem in providing this service is the distance to Galen which, at times, can create medical concerns for a client in acute withdrawal. Also, the distance is burdensome to the program's staff time and transportation allowance.

Solution: Plans to utilize community volunteers and seek additional funds for this service area are under consideration.

- ° Transitional Living - See above, Gaps in Services.

d. Problems with DUI court schools:

- ° No problems mentioned.

e. Prevention

- ° Literature distribution, school presentations and a Minors in Possession program are provided by the Park County Alcohol and Drug Program.

Problem: Media usage and direct advertisement of services is prohibitive due to costs.

3. County Plan Service Area

Anaconda, Deer Lodge County and Granite County [Phillipsburg area].
Population: 14,274

Local statistics were not updated in the FY 1986 plans.

a. Statistics

° Arrest and Law Enforcement information:

- Total arrests for four years were 2,272.
- Over a four year period there were 697 juvenile arrests for possession of alcohol.
- The police dispatcher reports that over 10,000 calls were documented through dispatching personnel for the past year. It is estimated that 95 percent of all law enforcement activity may be alcohol-related.
- DUI arrests over a four year period including FY 83 are 62.
- Granite County reports 26 alcohol related arrests for the past four years.

° Hospital Admissions

- Hospital admissions over a four year period with a diagnosis of alcoholism or acute intoxication were 84.

b. Gaps in Services

It is felt that all treatment needs are being met to a reasonable degree.

c. Problems in delivering or obtaining the following services:

- ° Outpatient - None
- ° Inpatient - None
- ° Detoxification - None
- ° Transitional Living - Too few transitional living facilities are available.

d. Problems with DUI court schools

No problems at this time.

e. Prevention

- ° Literature distribution, school presentations, workshops/seminars, and a Minors in Possession program are provided by Alcohol and Drug Services of Anaconda/Deer Lodge County.

Problem - Funds have not allowed for use of the media except as a free public service spot that has been used on the radio.

4. County Plan Service Area

Gallatin County

Population: 42,865

a. Statistics

Local statistics were not updated in the FY 1986 county plan.

° Alcohol and Drug related arrests for FY83:

- DUI - 454
- Non-DUI - 943

° Number of alcohol and drug admissions to hospitals in counties:

- FY82 - 52
- FY83 - 70

° Number of DUI's issued in counties:

- FY82 - 195
- FY83 - 454

b. Gaps in Services

° There is a need for more education and prevention than currently is being presented.

° There is a need in this area for an inpatient treatment center.

Solution: The State Department of Health approved a Certificate of Need for an inpatient treatment center in Bozeman on 11-5-82. Persons interested in establishing a small inpatient unit in Bozeman will be recruited.

c. Problems in delivering or obtaining the following services:

° Outpatient - No problem other than travel distance to West Yellowstone.

Solution: Whenever possible West Yellowstone clients will be encouraged to travel to Bozeman. The program is looking into maintaining audio-visual equipment in West Yellowstone so that local service providers can show educational materials.

° Inpatient - Distance to inpatient treatment sometimes creates a financial hardship for families. Some inpatient programs do not honor certain insurances.

Solution: New insurance laws should make inpatient care more available. See section on Gaps in Services.

- Detoxification - Galen and Bozeman Deaconess Hospital seem to be meeting this need presently and hopefully will do so in the future.
- Transitional Living - Not available and a facility for the area is needed. At present very few facilities exist in the state and the few that do exist are generally too far away to be considered practical for residents of Gallatin County.

Solution: If such a facility should become a reality in Gallatin County it would have to be self-supporting and/or financed with private monies.

d. Problems with DUI Court Schools:

- Logistic problem in providing DUI court school to West Yellowstone.

Solution: Hope to have video equipment located in West Yellowstone so that local service providers can show DUI clients tapes while staff spend their time in evaluation. Other than logistic problems there are no problems with the school at present.

e. Prevention

- Literature distribution, school presentations, workshops/seminars and media ads and announcements are provided. No problems mentioned.

5. County Plan Service Area

Broadwater, Jefferson, Lewis & Clark, Teton, Pondera, and Glacier counties. [Even though Pondera, Teton and Glacier counties are geographically located in Region II they have contracted with the Boyd Andrew Service Center in Region IV for provision of services]

Population: 77,200

a. Statistics

Local statistics were not updated in the FY 1986 county plans.

- The number of alcohol and drug related arrests within counties:

	<u>1981</u>	<u>1982</u>	<u>FY83</u>
Helena City Police	256	201	
Broadwater County	12	29	
Jefferson County	22	68	
Glacier County			124
Pondera County			33
Browning			325

- o The number of alcohol and drug admissions to hospitals in counties:

	<u>1981</u>	<u>1982</u>	<u>FY83</u>
St. Peter's Hospital - Helena	84	92	
Choteau Hospital		11	
Broadwater Hospital	7	7	
Glacier County			23
Pondera County			15
Browning			32

- o The number of DUI's issued in counties:

	<u>1981</u>	<u>1982</u>	<u>FY83</u>
Helena City Police	79	81	
Broadwater County	30	13	
Jefferson County	13	43	
Teton County	10	20	
Glacier County			10
Pondera County			20

b. Gaps in Services

- o Elderly - Specific treatment services for the elderly have not been developed to date.

Solution: Although substance abuse by elderly citizens is recognized as a serious problem, the primary cause appears to be ignorance rather than a conscious effort to abuse chemical substances. Therefore, Boyd Andrew Service Center will continue to target this population with prevention/education strategies.

- o Native Americans - Medicine Pine Lodge: extended care facilities are not available in the area. Existing facilities are filled and also located far from the Blackfoot Reservation.

Solution: Medicine Pine Lodge is presently working on expansion to provide some services for extended care on the reservation.

Medicine Pine Lodge has a building [old school] at Heart Butte that is being prepared for their treatment program. The existing facility in Browning will become detox only with an 18-bed capacity.

Presently, the Medicine Pine Lodge is using Napi Lodge, Lethbridge, Alberta, Canada, and St. Paul Treatment Center, Cardston, Alberta, Canada as referrals for extended care.

- o Women - This will be a priority target population. Special effort will be made to encourage treatment groups and individualized treatment plans that deal with the specialized needs of women. Further, it is planned that education will be geared toward women to encourage them to seek early intervention and early treatment.

- Youth - Because of our active role in Community Intervention, we plan to develop a cooperative and referral arrangement with the high schools and grade schools within the service area.

c. Problems in delivering or obtaining the following services:

- Outpatient - The major problem is the increasing demand for services with little hope of additional funding.

Solution: 1) To develop more aggressive strategies to collect client fees; 2) aggressively pursue 3rd party payments; and 3) explore more efficient methods of providing services, including greater use of group treatment strategies and more effective use of referral resources.

Medicine Pine Lodge - There is a shortage of staff due to lack of funds.

- Inpatient - The county plan states that the Boyd Andrew Service Center has experienced continuing problems in having persons admitted to Galen due to full occupancy or recidivism.

Solution: It is hoped that Galen's program philosophy will become more lenient in view of the fact that alternative resources for low income and indigent clients are almost non-existent with the exception of the 5 beds at Hilltop. It is hoped that this additional treatment could be financed from the State General Fund.

- Detoxification - Medicine Pine Lodge indicates they do not have enough bed space.

Solution - To open a treatment component at Heart Butte. The existing facility in Browning will become an 18-bed detox facility only.

- Transitional Living - There are no transitional living facilities for women so referrals for women in need of this services has been a problem. Medicine Pine Lodge says they do not have enough bed space.

d. Problems with DUI court schools:

- The law seems to need clarification and unification with some judges making referral to treatment.

Solution: The Boyd Andrew Service Center plans to do continuing education regarding this area. The county plan also states that Boyd Andrew Service Center may start a DUI school in Conrad or Cut Bank.

e. Prevention

- Boyd Andrew Service Center will distribute literature, make school presentations, hold workshops and use media announcements throughout this service area. The Center has indicated it will work closely with other agencies, law enforcement, juvenile probation, etc. and with school and local core groups to address the Minors in Possession problems.

6. County Plan Service Area

Powell County and Drummond, Hall and Maxville of Granite County

Population: 9,658

a. Statistics

Local statistics were not updated in the FY 1986 plans.

- o Number of alcohol and drug related arrests for FY83:

Powell County

- 80% of all teenage arrests are alcohol related.
- 60% of all crimes involve alcohol.
- There were 32 DUI's issued and 31 convictions.
- There were 80 cases involving alcohol and drugs in the McGillis Court.
- 33% of the cases in Justice Habbe's courts were alcohol related.

Granite County

- There were 10 DUI's issued and 8 convictions.
- There were 31 cases of minors in possession.
- 9 traffic violations were alcohol related.

- o Number of alcohol and drug related hospital admissions for FY83:

- Powell County Memorial Hospital - 14 diagnosed as alcoholism
- Granite Memorial Hospital - 4 alcohol and drug related admissions

b. Gaps in Services

- o Transitional living facilities not available within the immediate area.
- o Galen will not accept drug detox cases.
- o No transitional living facilities available for women.

c. Problems in delivering or obtaining the following services:

- o Outpatient - Special problems in this area due to lack of adequate help due to funding. The area is depressed and the majority of clients lack insurance and the ability to pay for services.
- o Inpatient - Full occupancy at Galen is a problem because clients have been referred back to the community to await an opening.

- ° Detoxification - Getting detoxification for drug clients is a problem because Galen will not accept these people. The only course of action for detoxification of drug clients is to refer them to local hospitals.
- ° Transitional Living - No facility is available in the immediate area; therefore, clients must be referred to other areas. There is no transitional living facility for women which creates a special problem throughout the state.

Solutions to Service Delivery Problems:

- ° Emergency care clients will be referred to local hospitals and transportation service to the Butte Care Unit will be offered.
- ° Refer those without insurance and ability to pay to Galen.
- ° Continue to refer clients to other areas until a transitional living facility can be developed in this area.
- ° Seek more funding through city, county, state and other funding sources.

e. Prevention

- ° Literature distribution, school presentation, workshops/seminars, media ads and a Minors in Possession program are provided by the Powell County Prevention Center. No problems mentioned at this time.

7. County Plan Service Area

Butte-Silver Bow County

Population: 37,950

a. Statistics

Local statistics were not updated in the FY 1986 county plan.

- ° FY 82-83 DUI arrests : 97
Drug arrests : 15
- ° FY 83 alcohol and drug hospital admissions: 282

b. Gaps in Services

- ° None at this time. Shodair has filled the gap that previously existed for youth treatment.

c. Problems in delivering or obtaining services:

- ° Outpatient - No problems at this time.
- ° Inpatient - No problems at this time.
- ° Detoxification - Galen has refused to admit indigent drug clients for detox leaving no other resource for treatment.
- ° Transitional Living - No problems at this time.

d. Problems with DUI Court Schools

- ° No problems at this time.

e. Prevention

- ° Literature distribution, school presentations, workshops/seminars, media ads and a Minors in Possession program are provided by the Butte-Silver Bow Alcohol and Drug Program.

B. Summary of Region IV County Chemical Dependency Plans and Obligation of FY86 County Tax Monies

1. Common Needs and Problems

- ° Three plans mentioned that obtaining inpatient treatment for indigents is costly due to transportation costs and the distance to Galen.
- ° Obtaining inpatient services for clients was delineated as a problem in three plans due to the fact that Galen is often full and clients are put on a waiting list.
- ° All seven plans stated that there is a gap in the continuum of care due to lack of transitional living facilities.

2. Obligation of County Earmarked Tax Monies for FY86.

- 1) Beaverhead
100% to Southwest Chemical Dependency Services - Park County - outpatient
- 2) Broadwater
100% to Boyd Andrew Service Center - outpatient
- 3) Deer Lodge
100% to Alcohol Service Center of Anaconda/Deer Lodge County-outpatient
- 4) Gallatin
100% to Alcohol Services of Gallatin County - outpatient
- 5) Glacier
50% to Boyd Andrew Service Center - outpatient
50% to Medicine Pine Lodge - detoxification

- 6) Granite
50% to Alcohol Services Center of Anaconda/Deer Lodge County-outpatient
50% to Powell County Alcohol Services
- 7) Jefferson
100% to Boyd Andrew Service Center - outpatient
- 8) Lewis & Clark
100% to Boyd Andrew Service Center - outpatient
- 9) Madison
100% to Southwest Chemical Dependency Services - Park County - outpatient
- 10) Meagher
100% to Park County Southwest Chemical Dependency Services - outpatient
- 11) Park
100% to Park County Southwest Chemical Dependency Services - outpatient
- 12) Pondera
100% to Boyd Andrew Service Center - outpatient
- 13) Powell
100% to Powell County Alcoholism Center - outpatient
- 14) Butte/Silver Bow
84% to Community Alcoholism Services - outpatient
16% to Butte Indian Alcohol Program - intermediate
- * 15) Teton
100% to Boyd Andrew Service Center - outpatient

* Glacier, Pondera and Teton counties, although geographically located in Region II, are included in the Region IV county plan summary because they contract for services from the Boyd Andrew Service Center in Helena and are part of the Broadwater, Jefferson, Lewis & Clark multi- county plan.

C. Region IV Statistics and Data Highlights

1. Primary Client Characteristics at Admission [See Table 40]

- ° Region IV has averaged 1,020 first admissions per year since 1980.
- ° 69% of first admissions since 1980 have been men.
- ° Treatment of youth 17 years and younger has increased from 9% of first admissions in 1980 to 24% in 1984. Admissions for clients between the ages of 18-20 have increased from 7% in 1980 to 14% in 1983 and first admissions of young adults between 21-25 has increased from 13% to 19%. In 1984, 57% of Region IV's treatment population was under the age of twenty-five.
- ° Since 1980, only 37% of the persons admitted to Region IV programs had some type of employment at the time of admission and only 46% had insurance.

2. Family Member Characteristics at Admission [See Table 41]

- ° Region IV has increased the number of family members admitted for treatment from 178 first admissions in 1980 to 535 in 1984.
- ° Although the majority of family members admitted as clients are women [approximately 77% of admission since 1980] there appears to be a trend that more men are seeking treatment as family members as evidenced by the fact that in 1980 men comprised only 19% of the total admissions compared with 32% in 1984.
- ° It is significant to note that 18% of family clients are under the age of seventeen which suggests that Region IV programs are impacting children of chemically dependent persons.
- ° 50% of the family clients were employed at admission and 66% had insurance.

3. DUI Client Characteristics at Admission [See Table 42]

- ° DUI court school client admissions have increased from 215 first admissions in 1980 to 928 admissions in 1984. This increase reflects the statewide trend which has resulted from stiffer DUI legislation enacted October 1981.
- ° Since 1980, 84% of all admissions to court schools were men; however, the number of women admitted to Region IV court school programs has increased from 14% of the total admissions in 1980 to 18% in 1984.
- ° 55% of clients admitted to DUI court schools were under 30 years of age and 17% were under the age of twenty.
- ° 65% of clients admitted to DUI court schools were employed at the time of admission and 56% had insurance.

4. Source of Referral [See Table 43]

- ° In 1983, the majority of referrals to Region IV programs were reported to be from court schools [23%], followed by referrals from other community chemical dependency programs [18%] and referrals from police, probation and/or parole [17%].

5. First Admissions to Chemical Dependency Programs by County of Residence and Admission Rates per Thousand [See Table 44]

- ° Admission rates per thousand, based on first admissions to state approved programs by county of residence, show that in 1984 Gallatin and Powell counties had the highest rate [13.0] in Region IV, followed by Beaverhead County [12.9] and Silver Bow County [10.2]. In 1984, Region IV had a slightly higher rate-per-thousand than the statewide rate of 8.4.

Died		1	1		
Treatment Plan Completed	40	48	41	53	63
Client Referred	16	9	12	9	5

TABLE 46

REGION IV

Primary Client Follow-up Information
Six Months After Discharge

Calendar Years 1980 - 1984

	1980	1981	1982	1983	1984
Number of Follow-up Attempts	82	391	365	569	683
Number of Successful Follow-up Contacts	48	287	242	210	353
Percent Contacted	59%	73%	66%	37%	52%
Percent in a Maintenance Program	56%	52%	38%	55%	45%
Percent Employed	65%	44%	48%	45%	57%
Percent Abstinent	81%	83%	84%	82%	83%

6. Reason for Discharge [See Table 45]

- Since 1980, 49% of the primary clients discharged from Region IV programs completed their treatment plans, 31% failed to complete treatment, 10% were inaccessible or moved and 10% were referred elsewhere. The number of clients completing treatment increased from 40% in 1980 to 63% in 1984.

7. Primary Client Follow-up Information [See Table 46]

- All state approved programs are required to do follow-up, for the purpose of determining treatment effectiveness, 6 months after the client's treatment plan has been completed. Chemical dependency programs in Region IV have attempted to follow-up 2,090 clients since 1980 and successfully contacted 1,140 [55%].
- Of the 1,140 successful follow-up contacts since 1980, 49% indicated they were involved in AA or a maintenance program, 52% were employed and 83% reported total abstinence.
- Although Region IV has increased the number of follow-up attempts from 82 in 1980 to 683 in 1984 the percent of clients contacted has decreased from 59% to 52%. The percent of clients employed at the time of follow-up has decreased from 65% in 1980 to 57% in 1984.

V. REGION V PLAN SUMMARIES AND STATISTICS

A. Individual County Plan Summaries

1. County Plan Service Area

Flathead County

Population: 51,462

a. Statistics

- ° Number of alcohol and drug related arrests: Nothing reported in county plan, or the FY 1986 updated plan.
- ° Number of alcohol and drug admissions to hospitals: None given; however, the county plan states that 300 clients were referred to inpatient treatment during the past two fiscal years [82-83] and it is estimated 60 people sought inpatient treatment on their own.
- ° Number of DUI's issued in county: Nothing reported in county plan.

b. Caps in Services

- ° While the need of inpatient treatment is currently being met through referrals to inpatient treatment centers throughout Montana and out-of-state, it appears the amount of referrals are increasing and shall exceed the availability of beds within the next year (FY85). The out-of-county referrals reflect a considerable monetary loss to Flathead County and inconvenience to the patient and family.

Solution: Currently the Heritage Corporation of Coeur D'Alene, Idaho is working toward a certificate of need to construct an Inpatient Chemical Dependency/Psychiatric Treatment Facility. Flathead county will support such a facility only if certain stipulations and requirements as outlined in the Flathead County Plan, are met.

The Heritage Corporation subsequently received the necessary approval to construct a treatment facility in Kalispell, and on May 1, 1985 opened the Glacier View Hospital designating 16 beds for chemical dependency inpatient treatment.

c. Problems in Delivering or Obtaining the Following Services:

- ° Outpatient - Over the past year the need for an Intensive Outpatient [non-residential] Treatment Program has become apparent. A certain segment of the treatment population is treatable within the community for less cost to the client and insurance companies.

Solution: Flathead County and Flathead Valley Chemical Dependency clinic recognizes this special treatment need and is currently developing a component of an existing organization to address this need. The program shall be in operation in 1984. This component is currently functioning.

- Inpatient - In some instances a waiting list for admission presents a problem.
- Detoxification - None. Kalispell Regional, North Valley, Whitefish hospitals are very cooperative.
- Transitional Living - None apparent.

d. Problems with DUI Court Schools

None apparent at this time.

e. Prevention

- Literature distribution, school presentations, workshops/seminars, media ads and a Student Assistance Program are provided by Flathead Valley Chemical Dependency Services. No problems mentioned.

2. County Plan Service Area

Lake County
Population: 19056

a. Statistics

No updated local statistics were included with the FY 1986 plan.

- Number of alcohol and drug related arrests within the county during the past fiscal year [83]: 16
- Number of alcohol and drug admissions to hospitals in county during the past fiscal year:

- drug	- 36	alcohol	- 95
--------	------	---------	------
- Number of DUI's issued in county during the past fiscal year:

- non-tribal	- 143	tribal	- 16
--------------	-------	--------	------

b. Gaps in Services

- A transitional living facility is needed to fill the gap between inpatient and outpatient/aftercare. Many clients and significant others complete the initial phase of the program and remain jobless, homeless, or otherwise in need of a further drug-free environment.

c. Problems in Delivering or Obtaining the Following Services:

- Outpatient - Fund availability. Outpatient/education counselor needs a secretary/receptionist and this is difficult to provide with available funds.

Solution: Secretary/receptionist position was filled with a half-time person by using funds that became available from other budget items. Additional funds requested and a continual search for additional funding.

- ° Inpatient - No problems.
- ° Detoxification - No problems.
- ° Transitional Living - See Section on Gaps in Services.

e. Prevention

- ° Literature distribution, school presentations, media ads and Minors in Possession program is provided by Lake County Chemical Dependency Services.

3. County Plan Service Area

Lincoln, Sanders and Mineral Counties
Population: 29,300

a. Statistics

No local statistics were included in the FY 1986 updated plan.

- ° Number of alcohol and drug related arrests:

	<u>FY 82</u>	<u>FY 83</u>
Mineral County	5	9
Lincoln	Not Compiled	
Sanders	Not Compiled	

The criminal justice system in Lincoln and Sanders County does not compile arrest statistics as to whether they are alcohol and drug related; however, police and sheriffs departments state that 85 percent of all their calls are directly or indirectly related to alcohol or drug abuse.

- ° Number of alcohol and drug related admissions:

	<u>FY 82</u>	<u>FY 83</u>
Mineral	2	7
Lincoln		10
Sanders		8

- ° Number of DUI's issued:

	<u>FY 82</u>	<u>FY 83</u>
Mineral	3	16
Lincoln/Sanders		80

b. Gaps in Services

- ° The program is providing necessary special treatment services within the restrictions of existing funding resources. Lack of counseling staff was mentioned. The counselor from Superior in Mineral County now provides services to the town of Plains.

c. Problems in Delivering or Obtaining the Following Services:

- ° Outpatient - Lincoln/Sanders: Lack of funding to provide staffing to provide services requested.

Solution: A billing plan has been implemented to develop more funds for staffing. May gradually increase client fees.

Mineral: Treatment and prevention needs for youth are not being met due to lack of staff time.

Solution: Additional state or local funds will need to be made available for this specific purpose.

- Inpatient - Lincoln/Sanders: Galen, at times, does not have sufficient room for one to two weeks because of lack of available beds.

Mineral: There is also increasing need for an adolescent inpatient treatment unit for indigent or low income youth.

Solution: Encourage expansion of adult beds at Galen and recommend the development of an adolescent chemical dependency unit at Galen.

- Detoxification - No problems.
- Transitional Living - No problems.

d. Problems with DUI Court Schools:

Mineral County: The number of Montana court school admissions in Mineral County do not accurately reflect drunk driving offenses occurring within one county.

Sanders County: There is a need to address the awareness problem in Sanders County.

Solution: A task force is being formed to increase the awareness of the problem and apply pressure on law enforcement officials to increase the enforcement of DUI laws.

Lincoln County: No problems mentioned.

e. Prevention

- Literature distribution, school presentations, workshops/seminars and media ads are available in all three counties. An educational program for youth referred through juvenile probation departments is provided by the Lincoln/Sanders program.

Problems: No Minors in Possession programming has been implemented in Mineral County due to lack of staff and lack of school support for adolescent intervention programming.

4. County Plan Service Area

Missoula County
Population: 76,016

a. Statistics

Local statistics were not updated in the FY 1986 plan update.

o	Alcohol and drug related arrests in FY83:	774
o	Alcohol and drug related hospital admissions in FY83:	94
o	Number of DUI's issued in FY82	172
o	Number of DUI's issued in FY83	378

b. Gaps in Services

- o Missoula County intends to fund an alcohol plan to be completed during FY85 which will involve research and quantitative analysis of needs not being met.

c. Problems in Delivering or Obtaining the Following Services:

- o Outpatient - No problems.
- o Inpatient - Access to the alcoholism treatment program [28 day program] is becoming increasingly difficult. The treatment program often operates at capacity and necessitates waiting periods of a week or more. There is an increasing need for an adolescent inpatient treatment unit for indigent or low income youth.

Solution: The strategy for solving the inpatient backlog and youth treatment area is currently being developed. A request for \$3,000 is being submitted to the Missoula Board of County Commissioners to do a comprehensive analysis of Missoula County's chemical dependency problems. The plan will involve analyzing all chemical dependency services as well as developing a strategy for solving service delivery problems.

- o Detoxification - Detoxification for indigent clients with drug dependency other than alcohol are often refused by Galen medical personnel. Missoula County did not appropriate funds for detoxification in FY 1986.

Solution: Clarification of medical policy would be helpful.

- o Transitional Living - No problems.

d. Problems with DUI Court Schools

No problems identified.

e. Prevention

- o Literature distribution, school presentations, workshops/seminars, media ads and a Minors in Possession program are available in Missoula County. No prevention problems were mentioned.

5. County Plan Service Area

Ravalli County

Population: 22,493

a. Statistics

Local statistics were not updated in the FY 1986 county plan update.

- Number of alcohol and drug related arrests in county for FY83: 208
- Number of alcohol and drug related hospital admissions in county for FY83: 36 admissions for alcoholism and 8 drug overdoses.
- Number of DUI's issued in county for FY83: 151

b. Gaps in Services

- All areas of treatment needs are currently being met on a limited basis. The extent of the needs exceed the services that can be provided by a professional staff of three.

Solution: 1) Increased emphasis on group counseling as a primary treatment modality; 2) implementation of a volunteer counselor training program to provide outreach services to specific target populations and to provide participation for increased group emphasis; and 3) expanding professional staff. Third party payments, expanding local funding base, development of a community task force, increased use of volunteer administrative support staff, foundation funding and federal grants are being explored as potential means for allowing professional staff expansion.

c. Problems in Delivering or Obtaining the Following Services:

- Outpatient - See section on gaps in services.
- Inpatient - No problems.
- Detoxification - No problems.
- Transitional Living - There are no appropriate transitional living facilities for women in Montana.

Solution: Referrals for women to transitional living facilities were made to out-of-state resources.

d. Problems with DUI Court Schools

No major problems.

e. Prevention

- Literature distribution, school presentations, workshops/seminars, media ads and a Minors in Possession program is provided by Ravalli County Chemical Dependency Services. No problems mentioned.

B. Summary of Region V Chemical Dependency Plan and Obligation of FY86 County Tax Monies

1. Common Needs and Problems:

- ° Obtaining inpatient treatment for clients is sometimes difficult because of waiting lists and lack of available treatment beds, particularly at Galen.
- ° An increasing need for an adolescent inpatient treatment unit for indigent and low income youth was identified in two plans.

2. Obligation of County Earmarked Tax Monies for FY86

- 1) Flathead
100% to Flathead Valley Chemical Dependency Services - outpatient
- 2) Lake
100% to Lake County Chemical Dependency Program - outpatient
- 3) Lincoln
100% to the Alcohol and Drug Centers of Lincoln and Sanders Counties - outpatient
- 4) Mineral
100% to the Alcohol and Drug Centers of Lincoln and Sanders Counties - outpatient
- 5) Missoula
91% to Recovery Foundation, Inc. - intermediate and outpatient
09% to Missoula Indian Alcohol and Drug Services - outpatient
- 6) Ravalli
100% to Ravalli Chemical Dependency Services - outpatient
- 7) Sanders
100% to the Alcohol and Drug Centers of Lincoln and Sanders Counties - outpatient

C. Region V Statistics and Data Highlights

1. Primary Client Characteristics at Admission [See Table 47]

- ° Region V has averaged 1,088 first admissions per year since 1980. The number of first admissions has increased from 848 in 1980 to 1,298 in 1984.
- ° Since 1980, 74% of all first admissions to Region V programs have been men; there has been a slight decrease of women entering treatment in this region; in 1980 women accounted for 28% of all admissions compared to 26% in 1984.

- Treatment of youth 17 years and younger has consistently averaged 12% of all first admissions. Admission of clients between the ages of 18-20 has increased from 13% in 1980 to 15% in 1984. Clients in the age group 21-25 have consistently accounted for 17% of all first admissions.
- Since 1980, only 43% of the persons admitted to Region V programs were employed and only 45% had insurance.

2. Family Member Characteristics at Admission [See Table 48]

- Region V has increased the number of family members admitted for treatment from 196 in 1980 to 234 in 1984.
- Although the majority of family members admitted as clients are women [approximately 80% of admissions since 1980] there appears to be a trend that more men are seeking treatment as family members as evidenced by the fact that in 1980 men comprised only 16% of the total admissions compared with 25% in 1984.
- It is significant to note that 13% of family clients were under the age of seventeen which suggests that Region V programs are impacting children of chemically dependent persons.
- Only 47% of family clients were employed at admission; however, 66% had insurance.

3. DUI Client Characteristics at Admission [See Table 49]

- DUI court school client admissions have increased drastically in Region V from 379 first admissions in 1980 to 1,199 admissions in 1984. This increase reflects the statewide trend which has resulted from stiffer DUI legislation enacted in October 1981.
- Since 1980, 83% of the admissions to DUI court schools were men; the percentage of women admitted to Region V court school programs has consistently accounted for 17% of the admissions.
- 54% of clients admitted to DUI court schools were under 30 years of age.
- 64% of clients admitted to DUI court schools were employed at the time of admission; however, only 47% had insurance.

4. Source of Referral at Admission [See Table 50]

- In 1984, the majority of referrals to Region V programs were from the courts [40%], followed by self-referrals [14%] and other programs [11%].

5. First Admission to Chemical Dependency Programs by County of Residence and Admission Rates Per Thousand [See Table 51]
 - ° Admission rates per thousand, based on first admissions to state-approved chemical dependency programs by county of residence, show that in 1984 Lincoln County had the highest rate [12.9] in Region V, followed by Flathead County [12.6] and Lake County [8.6]. Region V has consistently had a higher admission rate per thousand than the statewide average until 1984 when it equaled the state average of 8.4.
6. Reason for Discharge [See Table 52]
 - ° Since 1980, 37% of the primary clients discharged from Region V programs completed their treatment plans, 43% failed to complete treatment, 9% were inaccessible or moved and 12% were referred elsewhere.
 - ° It appears that an effort has been made in Region V to increase the percent of client's who complete treatment. In 1980 only 25% of the client's discharged completed treatment compared with 48% in 1984.
7. Primary Client Follow-Up Information [See Table 53]
 - ° All state-approved programs are required to do follow-up, for the purpose of determining program effectiveness, 6 months after the client's treatment plan has been completed. Chemical dependency programs in Region V have attempted to follow-up 1,667 clients since 1980 and successfully contacted 653 [39%].
 - ° Of the 653 successful follow-up contacts since 1980, 46% indicated they were involved in AA or a maintenance program, 64% were employed and 83% reported total abstinence.
 - ° The number of follow-up attempts in Region V has increased from 46 in 1980 to 700 in 1984.

6.0 BUDGET INFORMATION

6.1 State Budget Process

Budgets are developed annually by the Alcohol and Drug Abuse Division based upon historical costs and any anticipated expansions. The State of Montana operates on a July 1 through June 30 fiscal year. All Divisions within the Department prepare budgets in coordination with the Department's Management Services Division.

The Department of Institutions budget is submitted by the Management Services Division with approval from the Department Director, to the Governor's Office of Budget and Program Planning [OBPP] for review and approval. When approved, the Department of Institutions budget is included in the Executive Budget prepared by the OBPP.

After review by the OBPP, the Department of Institutions' budget is given to the legislative appropriations subcommittee. The subcommittee compares the Department's budget, included in the Executive Budget, to a similar budget prepared by the Legislative Fiscal Analyst. Through negotiations, a final budget is arrived at by the legislative appropriations subcommittee. The budget, as agreed upon by the subcommittee, the Office of Budget and Program Planning, and the Department of Institutions is submitted to the legislature for final appropriations. Appropriations are made on a biennial basis by the legislature.

6.2 Proposed Budget

<u>ADAD ADMINISTRATION</u>	<u>FY86</u>	<u>FY87</u>

8/4 mo.

* Combined with Beaverhead/Madison
 ** Fundonly if Program combines with Lewistown
 *** Contract will pay for 1,460 bed days
 **** Contract will pay for 713 hourly units of service

7.0 STATEWIDE GOALS AND OBJECTIVES

Goal #1: Maintain the current level of chemical dependency services in Montana.

- Objective 1: Maintain a minimum client/counselor ratio of 1 to 20 in all state-approved outpatient programs and maintain an occupancy rate of at least 70% in all state-approved inpatient, detoxification and intermediate care treatment program components.
- Objective 2: Contract department discretionary block grant funds to chemical dependency programs based on ADAD review criteria and funding priorities by July 1 each year.
- Objective 3: Contract Federal and State funds with approved drug clinics for outpatient and prevention/education or early intervention services by July 1 each year.
- Objective 4: Cooperate with the Corrections Division and Board of Pardons in establishing and conducting chemical dependency programs for individuals in or on parole from penal institutions.
- Objective 5: Maintain the computerized Alcohol and Drug Information System (ADIS) for all state-approved chemical dependency programs and continue to process educational school (DUI) information.
-

Goal #2: Maintain the quality of chemical dependency services provided in Montana.

- Objective 1: Conduct on-site program evaluations of all state-approved chemical dependency programs at least annually to determine approval status and to ensure compliance with state treatment and educational course standards.
- Objective 2: Continue all phases of the counselor certification program, including compliance with continuing education requirements.
- Objective 3: Demonstrate program effectiveness as measured by the following indicators:
- ° Detoxification - maintain at least 70% bed utilization; 80% completion ratio and 50% successful referrals to other treatment.
 - ° Inpatient - maintain at least 70% bed utilization; 80% completion ratio; follow-up contact with 55% of clients 6 months after discharge; and document 80% improvement 6 months after discharge.

- ° Intermediate - maintain 70% bed utilization; document 70% completion ratio; 75% successful referrals to employment or education programs at discharge; follow-up contact with 55% of clients 6 months after discharge; and document 70% improvement 6 months after discharge.
- ° Outpatient - maintain 100% of required 1/20 staff to client ratio; provide at least 2.5 counseling sessions to client per month; maintain 45% completion ratio; follow-up contact with 55% of clients 6 months after discharge; and document 70% improvement 6 months after discharge.

Objective 4: To encourage and support statewide training for treatment program personnel through qualified organizations and service providers.

Goal #3: Continue to allocate resources in accordance with federal and state requirements for the purpose of ensuring efficiency, cost effectiveness and availability of services.

- Objective 1: Distribute federal and state funds according to federal and state laws and regulations.
- Objective 2: Review requests for approval of new programs, program expansions, and private for-profit programs based on ADAD review criteria and continue to discourage duplication of services.
- Objective 3: Encourage program consolidation and development of multi-county or district programs.
- Objective 4: Encourage all publicly funded chemical dependency programs to increase service revenue so that a minimum of 25% of the total operational budget is obtainable from this source by June, 1987.
- Objective 5: Determine possible solutions to the problem of obtaining treatment for indigent clients in areas of the state which are a long distance from Galen [Regions I and III].
- Objective 6: If funding becomes available, consider expansion of transitional living facilities and the purchase of inpatient beds for indigents.
- Objective 7: Determine the number of inpatient treatment beds needed in Montana in cooperation with the Department of Health and Environmental Sciences and the Montana Health Systems Agency for use in Certificate of Need reviews and update annually.

Goal #4: Encourage local communities and state-approved chemical dependency programs to play the primary role in the development and implementation of prevention activities.

- Objective 1: Support the current level of prevention activities in local communities.
- Objective 2: Encourage and assist local schools to implement the Montana Teachers Guide for Alcohol Education in grades K-12.
- Objective 3: Maintain the current level of prevention activities offered by existing programs and require that each drug clinic deliver structured prevention, education and early intervention.
- Objective 4: Increase information on chemical dependency by providing sample literature and by promoting the use of federal public education media campaigns.
- Objective 5: Inform other agencies of all aspects of educational Schools DUI and the Minors in Possession substance abuse information course} and provide assistance.
- Objective 6: Develop standards and approve DUI and the Minors in Possession substance abuse information course operating in state-approved treatment programs.
-

Goal #5: Continue to assess the chemical dependency service needs of Montana and determine specific strategies to meet identified needs.

- Objective 1: Based on county plans, treatment data, cost information and legislative priorities, develop a comprehensive chemical dependency plan every four years.
- Objective 2: Coordinate with other planning agencies to ensure a coordinated statewide planning effort for chemical dependency services.

200 copies of this public document were published at an estimated cost of \$4.00 per copy, for a total cost of \$800.00, which includes \$745.00 for printing and \$55.00 for distribution.
